The Great Blue Heron
© 2017
Painted water jet cut steel panel

The great blue heron depicted here life-size, has a wingspan of approximately 6.5 feet. Mission Creek that runs through the site has historically provided a natural and hunting ground for the great blue heron in its search for frogs, fish, grasshoppers and other small animals. Here the bird carries a leafless branch, the building materials for its nest.

Collection of the City and County of San Francisco
