

Gateway Tower Temporary Installation

Please see the accompanying 3D conceptual rendering which indicates site placement and scale in Justin Herman plaza. The styling and color of the doors were not meant to be the proposed final but are rather suggestive placeholders of the final design.

The piece will be constructed of vintage solid wood doors from iconic neighborhoods throughout San Francisco. With color, texture, and detail influenced by the Painted Ladies. It will be bright and expressive while showcasing the craftsmanship of the city we love. The peak of the tower will be created also from solid wood reclaimed and beautifully finished.

The tower is meant to be visually engaging both from a distance and up close.

The installation will be in place from July 22nd through October 17th, 2019. It is privately funded by Unison Corporation, a home building company.
