

1 SAN FRANCISCO ELECTIONS COMMISSION

2 **Open Source Voting Systems Resolution #2 (DRAFT)**

3 (Adopted by the San Francisco Elections Commission (X-X) on XXX.)

4
5 [The Commission is adopting this resolution to supplement (and not replace) its first
6 Open Source Voting Systems Resolution, adopted on November 18, 2015, since many
7 events have transpired since that time.]

8
9 WHEREAS, The San Francisco Elections Commission (“Elections Commission”)
10 on November 18, 2015 unanimously passed an Open Source Voting Systems
11 Resolution that, in part—

- 12 (a) Encouraged the Mayor and Board of Supervisors to initiate and fund a project
13 to develop and certify an open source voting system; and
14 (b) Outlined several key project characteristics, and encouraged the Mayor and
15 Board of Supervisors to consider incorporating them; and
16 (c) Established a policy for the San Francisco Department of Elections to support
17 and work towards the adoption of an open source voting system;

18 WHEREAS, Mayor Ed Lee in the 2016 budget process allocated \$300,000
19 towards a planning and assessment phase for the project, approximately half of which
20 was allocated for a “business case” to assess the feasibility of the project, including
21 informing the City and County of San Francisco (“San Francisco”) of the associated
22 costs, timelines, options, and possible next steps;

23 WHEREAS, The Elections Commission on April 19, 2017 established an Open
24 Source Voting System Technical Advisory Committee (“TAC”) to provide technical

1 guidance, ideas, and support to the Elections Commission on ways to improve and help
2 ensure the success of San Francisco's open source voting system project;

3 WHEREAS, The Department of Elections in May 2017 issued the RFP for the
4 business case, which stipulated that, "Any Contractor who prepares or assists in
5 preparing the business case described in this RFP will not be eligible to perform
6 subsequent services for the City in relation to the possible development of an
7 accessible, open source voting system," which resulted in organizations with the most
8 interest and expertise not bidding;

9 WHEREAS, The winning bidder, Slalom, whose contract was signed September
10 29, 2017, had no prior experience in elections or voting systems and little or no
11 experience with open source development efforts;

12 WHEREAS, Travis County, Texas on September 28, 2017 cancelled its
13 STAR-Vote project, in large part because its monolithic, waterfall-like approach sought
14 to build all components at once as opposed to developing components delivering usable
15 functionality incrementally, and which differed from San Francisco's project because it—

16 (a) Was larger in scope to the extent that its core purpose was to fundamentally
17 change how voting was performed, recorded, tabulated, and verified;

18 (b) Was based on a proprietary source rather than an open source development
19 plan and only anticipated becoming open source eventually; and

20 (c) Lacked a business / development plan to incrementally provide usable
21 functionality within the available funding capacity;

22 WHEREAS, Slalom delivered its final report to San Francisco for review by the
23 Mayor's Office and San Francisco's Committee on Information Technology ("COIT") on

1 March 14, 2018, more than six weeks after the January 26, 2018 due date and well into
2 San Francisco's annual budget process;

3 WHEREAS, Slalom's report recommended a waterfall-like approach and lacked
4 the information, specificity, and credibility needed for San Francisco leaders and
5 stakeholders to decide on next steps, including—

6 (a) Recommended a second, much more expensive planning phase of \$1.1 to
7 \$1.2 million that the report called a “Discovery Phase,” which would take place
8 before doing any actual development and whose purpose included doing many of
9 the things the business case was supposed to do;

10 (b) Failing to consult with vendors and organizations that the Commission invited
11 to present at its October 21, 2015 meeting—subsequent to the Department of
12 Elections’ August 6, 2015 RFI (REG 2015-01) in relation to obtaining a new
13 voting system—all of whom presented cost estimates much lower than those
14 provided in Slalom’s report;

15 (c) Provided excessively high cost estimates with extremely wide ranges,
16 including—

17 (1) \$850,000 to \$2 million to develop a “Vote Tabulator System,” a simple
18 component responsible for summing vote totals;

19 (2) \$860,000 to \$2 million to develop a “Vote Reporting System,” a simple
20 component responsible for generating static reports of vote totals; and

21 (3) \$500,000 to \$1 million per year for “cloud-based hosting,” even though
22 only a remote accessible vote by mail component is allowed to be
23 connected to the internet, such a component would require a much

1 smaller hosting requirement, and such a component is not a requirement
2 to implement any other part of the system;

3 WHEREAS, TAC on March 8, 2018 voted unanimously to recommend to the
4 Elections Commission that—

5 (a) “the Mayor budget for the Department of Elections a full-time staff person who
6 can serve as the project lead / product owner for the project and report directly to
7 the Director of Elections”; and that

8 (b) “an agile, incremental approach be taken towards the project, in which
9 components can be piloted and used in real elections [in conjunction with the
10 proprietary system in use] as the components are developed and certified,”
11 starting with the components needed to tabulate vote-by-mail ballots;

12 WHEREAS, The Elections Commission on March 21, 2018 voted unanimously to
13 approve TAC's March 8, 2018 recommendations;

14 WHEREAS, TAC on June 14, 2018 voted unanimously to adopt a statement on
15 Slalom’s “Open Source Voting System Feasibility Assessment,” beginning, “Certain
16 inaccuracies and basic omissions in Slalom’s Report lead us to seriously question the
17 report as a whole. We recommend not relying on it for determining the future direction of
18 the project”;

19 WHEREAS, TAC also on June 14, 2018 voted unanimously to adopt a project to
20 implement a full-featured election results reporter as a proof of concept, to show in part
21 that a reporting component can be developed for much less cost than the \$860,000 to
22 \$2 million estimated by Slalom;

23 WHEREAS, The Open Source Voting System Resolution unanimously passed by
24 the Elections Commission on November 18, 2015 encouraged that the project “First,

1 hire a project director with technical expertise to be responsible for planning and leading
2 the project, including working with stakeholders, collaborators, and regulators; drafting
3 system requirements; and selecting and managing technical contractors, as necessary”;

4 WHEREAS, The Department of Technology and Department of Elections jointly
5 submitted to COIT an application for funding the open source voting system project in
6 FY2018-19 with an additional \$960,000; and in response COIT recommended only an
7 additional \$300,000, for a total of \$425,000 available for FY2018-19;

8 WHEREAS, San Francisco’s Department of Human Resources (“DHR”) in 2017
9 started a technology project to modernize its hiring practices (the “Hiring Modernization
10 Project”) using an iterative, modular approach that internally it estimated could cost
11 between \$20-30 million over five years;

12 WHEREAS, COIT on May 4, 2018 recommended allocating \$1 million in seed
13 money for the first year (FY2018-19) of the Hiring Modernization Project, for the
14 purposes of hiring a Project Manager and starting incremental development—even
15 though DHR recognizes that their overall estimate will continue to evolve since the
16 project is being approached in a modular and iterative way;

17 WHEREAS, The Elections Commission is responsible for the proper
18 administration of the general practices of the Department of Elections, which in turn is
19 vested with the conduct and management of matters pertaining to elections in San
20 Francisco;

21 WHEREAS, Since voting systems pertain to and are used in elections in San
22 Francisco, their development by San Francisco should require the same level of
23 transparency and public oversight that elections themselves require;

1 WHEREAS, Department of Elections work on the open source voting system
2 project has been heavily reliant on and subject to direction from the Mayor’s office;

3 WHEREAS, Progress towards planning and development of an open source
4 voting system has so far been hampered by the lack of both clear designations of
5 accountability and a person with appropriate skills and experience to lead the project;

6 WHEREAS, Significant efforts and progress have been made by the California
7 Clean Money Campaign in conjunction with some San Francisco elected officials to
8 provide for state matching funds for open source voting systems;

9 WHEREAS, Clearer and renewed commitments from the Mayor and the Board of
10 Supervisors for an open source voting system, including a commitment for greater
11 funding in FY2018-19, would strengthen the project’s ability to attract effective
12 development collaborators and supplementary sources of funding;

13 WHEREAS, Board of Supervisors President and Mayor-elect London Breed,
14 Board of Supervisors Budget and Finance Committee Chair Malia Cohen, and Board of
15 Supervisors Member Jane Kim recently made public statements in support of effective
16 funding to start developing an open source voting system project, in response to the
17 Elections Commission’s request of \$4 million for FY2018-19; now, therefore be it

18 RESOLVED, That the Elections Commission calls on the Mayor and Board of
19 Supervisors to state their commitment to effectively proceeding with San Francisco’s
20 open source voting system project, so that the Elections Commission, Department of
21 Elections, and the rest of San Francisco can state publicly and unambiguously that San
22 Francisco has decided to move forward, which will allow San Francisco to more
23 effectively identify and attract potential collaborators and other funders, including the
24 State of California, nonprofits, and other counties; and, be it

1 FURTHER RESOLVED, That the Commission ask the Mayor and Board of
2 Supervisors that the project be funded and developed incrementally, so that San
3 Francisco can support a robust development schedule in FY2018-19 that—

4 (a) Develops and uses some open source voting system components sooner and
5 more cost-effectively, without necessarily having to first fund the entire project;

6 (b) Develop cost estimates and project management approaches for later stages
7 of the project by learning from real-world experience, as opposed to planning
8 abstractly on paper; and

9 (c) More effectively attract and recruit project collaborators, by being able to
10 show real progress using innovative approaches; and, be it

11 FURTHER RESOLVED, That the Elections Commission ask the Mayor and
12 Board of Supervisors to name the Department of Elections as the owner of the project
13 to develop and certify an open source voting system, so that the Elections Commission
14 and the public can, through the authority and meetings of the Elections Commission,
15 have oversight over and regular visibility into this fundamental matter pertaining to
16 elections; and, be it

17 FURTHER RESOLVED, That it is the policy of the Elections Commission that the
18 open source voting system project should be led by a dedicated project director / project
19 manager who reports to the Director of Elections; who has experience in agile methods,
20 open source development, elections and voting systems, and the management of
21 technical projects; and who will—

22 (a) Work with the Director and other stakeholders in San Francisco;

23 (b) Use the Slalom report, TAC, and other Departments as resources, including
24 learning from the model of DHR's Hiring Modernization Project;

1 (c) Use the RFI process to learn possible approaches from vendors; and, be it

2 FURTHER RESOLVED, That the Elections Commission rejects the cost
3 estimates in the Slalom Report as poorly supported and not credible, and the waterfall
4 approach recommended in the report as outmoded, inconsistent with the agile approach
5 preferred by the Commission, and generally not in San Francisco's interest due to the
6 increased cost and risk; and, be it

7 FINALLY RESOLVED, That the Commission encourages the Department of
8 Elections to continue its best practices of working collaboratively with other
9 Departments, including the Department of Technology, San Francisco Digital Services,
10 the Office of Contract Administration, the Mayor's Office, and other members of COIT
11 on the project.
