RE: Arlo open source risk-limiting audit (RLA) software

At its February 13, 2020 meeting, the Open Source Voting System Technical Advisory Committee (OSVTAC) voted to adopt the following statement and communicate it to the Elections Commission, the Department of Technology, and the Department of Elections.

Recommendation regarding the Arlo open source risk-limiting audit (RLA) software

TAC recommends that the Department of Elections and the Department of Technology review the status and roadmap of the open source Arlo project (available at <https://github.com/votingworks/arlo>) for possible use for risk-limiting audits in San Francisco (including for ranked-choice voting contests) and to report on the findings and use them in future planning.
