

Instructions for Calculating Supplemental Compensation
For an employee with Multiple Employers with Tips

As a Covered Employer with an employee that has more than one employer, you must only pay Supplemental Compensation corresponding to your portion of the covered employee's Normal Gross Weekly Wages. Your employee is required by law to notify you if there is more than one employer and provide information about wages and reported tips from other employers in order to receive Supplemental Compensation.

The goal of this calculation is to establish the Normal Gross Weekly Wages including reported tips, the total Supplemental Compensation and the employer's portion of the weekly Supplemental Compensation amount.

Terms:

A = EDD Weekly Benefit Amount

B = Total Normal Weekly Wage including reported tips for all employers

C = Remainder after EDD Weekly Amount

D = Employer 1 Normal Weekly Wage without reported tips

E1 % = Employer 1 percentage of Remainder after EDD Weekly Amount

E = Employer 1 amount of Weekly Supplemental Compensation to pay employee

Calculation: $(E1\%) \times C = E$

Documents Needed: The EDD Notice of Computation Form (DE 429D) or the employee's weekly benefit amount provided by EDD, Employer Payroll Records covering the lookback period (as defined in the Ordinance and below), and the San Francisco Paid Parental Leave Form will provide the information needed to complete the calculation.

Step One: Find the employee's California Employment Development Department (EDD) weekly benefit amount from the EDD Notice of Computation form provided by the employee or use the weekly benefit amount provided to you by EDD.

EDD Weekly Benefit (A) = _____

Step Two: Determine the employee's total normal gross weekly wages including reported tips for all employers from employer payroll records and the San Francisco Paid Parental Leave Employee Form.

Total Normal Weekly Wage (B) = _____

Since earnings with tips fluctuate, they must be calculated based on the Paid Parental Leave lookback period. The lookback period is defined as "immediately preceding the start of the employee's California Paid Family Leave Period (or immediately preceding pregnancy disability leave for women transitioning directly to Paid Family Leave)." The period contains six bi-weekly or semi-monthly, or 12 weekly pay periods and is codified at 3300H.4(b)1(B).

The grids below will help you calculate the employee's average, Total Normal Weekly Wage including tips. If your employee was on unpaid or partially paid leave for any of these pay periods (such as pregnancy disability leave) do not include those pay periods in calculating the Normal Weekly Wage.

**Instructions for Calculating Supplemental Compensation
For an employee with Multiple Employers with Tips**

Rather, add in earlier pay periods up to 26 weeks prior to the start date of your employee’s California Paid Family leave for bonding.

Fill in your employee’s pre-tax wages in the E1 Wages grid row and reported tips in E1 Tips based on how the employee is paid: bi-weekly, semi-monthly, or weekly and add the starting pay period date in the top of each column. For each additional employer reported on the San Francisco Paid Parental Leave Employee Form, enter the weekly wages and tips in E2 Wages and E2 Tips in the additional grids. If there are more than two, add additional rows as needed.

Sum each row in the final column and determine the average weekly wage and average weekly tip amounts. For weekly and bi-weekly sums, divide by 12 and for semi-monthly divide by 13.

The sum of the average wages and average tips is the employee’s average, total normal weekly wage or (B).

Weekly pay:

Pay Period Start Date														Sum
E1 Wages														
E1 Tips														
E _{2,3} Wages														
E _{2,3} Tips														

Add the sum of wages divided by 12 _____ = Avg Wages and sum of tips divided by 12 _____ = Avg Tips

The sum of average wages and average tips will be the Total Normal Weekly Wage or (B)_____

Bi-weekly pay:

Pay Period Start Date								Sum
E ₁ Wages								
E ₁ Tips								
E _{2,3} Wages								
E _{2,3} Tips								

Add sum of wages divided by 12 _____ = Avg Wages and sum of tips divided by 12 _____ = Avg Tips

The sum of average wages and average tips will be the Total Normal Weekly Wage or (B)_____

Instructions for Calculating Supplemental Compensation
For an employee with Multiple Employers with Tips

Semi-Monthly pay:

Pay Period Start Date							Sum
E ₁ Wages							
E ₁ Tips							
E _{2,3} Wages							
E _{2,3} Tips							

Add the sum of wages divided by 13 _____ = Avg Wages and sum of tips divided by 12 _____ = Avg Tips

The sum of average wages and average tips will be the Total Normal Weekly Wage or (B)_____

Step Three: Is the Total Normal Weekly Wage including reported tips greater than \$2027 (2018 Maximum Benefit Amount)?

If yes, then use \$2027 for “B” in the calculation below.

If no, then use “B” from above.

Step Four: determine the Remainder after EDD Weekly Benefit amount by subtracting A from B.

$B - A = C$ _____ Remainder after EDD Weekly Benefit amount

Step Five: Calculate the Employer 1 (E1) average weekly wages paid to the employee without tips (D) by dividing the sum of E1 wages from the grid above by the appropriate factor.

$D =$ _____ Employer 1 Total Normal Weekly Wage without reported tips

Step Six: Divide the Employer 1 average weekly wage without reported tips (D) by the Total Normal Weekly Wages (B) to determine the Employer 1 percentage of the Remainder after EDD Benefit Amount.

$D/B =$ _____ (E1 %) or Employer 1 Percentage of the Remainder after EDD Benefit Amount

Step Seven: Multiply the Employer 1 percentage (E1%) by the Remainder after EDD Weekly Benefit Amount (C) to get the employer weekly Supplemental Compensation amount. This is the amount the employer will pay weekly to a covered employee.

$(E1\%) \times C = E$ _____ Employer 1 Weekly Supplemental Compensation amount
