WHAT IS THE PIPELINE?

The San Francisco consolidated pipeline consists of development projects that would add residential units or commercial space, applications for which have been formally submitted to the Planning Department or the Department of Building Inspection (DBI). Pipeline projects encompass various stages of development: from applications filed to entitlements secured, building permits issued to projects under construction. The pipeline includes only those projects with a land use or building permit application. It does not include projects undergoing preliminary Planning Department project review or projections based on area plan analysis. When a project is issued a Certificate of Final Completion by DBI, it is taken out of the pipeline.

To filter inactive projects, the current pipeline only includes projects filed during the last five years, projects approved in the last four years (with the exception of large projects, which are kept for seven years), and projects for which construction has begun during the past three years.

Data sources for the pipeline are chiefly the project databases maintained by the Planning Department and the Department of Building Inspection, respectively, but data is also periodically obtained from the (now Successor Agency to the) San Francisco Redevelopment Agency. Affordable housing projects sponsored by the Mayor's Office of Housing figure in the pipeline database only after an application has been filed with either the Planning Department or the Department of Building Inspection.

The *Pipeline Report* measures housing production in terms of housing units. Non-residential development, on the other hand, is measured in terms of building square footage. Depending on the proposed development project, square footage can be added with new construction or expansion, reduced with demolition or alteration, or re-allocated with conversion to other uses. This report counts *net change*, or new space or units minus existing space lost through conversion or demolition.

Time Frame and Certainty of Development

As the pipeline spans the entire project development life cycle for small and large projects ranging from addition of an extra unit in the rear yard to multi-structure complexes of residential and commercial development needing environmental impact reports and transportation studies, it follows that the entitlement and ultimate actualization of some projects is several years and occasionally decades into the future, while some projects are abandoned altogether prior to receiving a permit or completion. The pipeline, then, represents a particular scenario that assumes that all proposed development projects are eventually entitled and all entitled development projects eventually built. In reality, this is not the case.

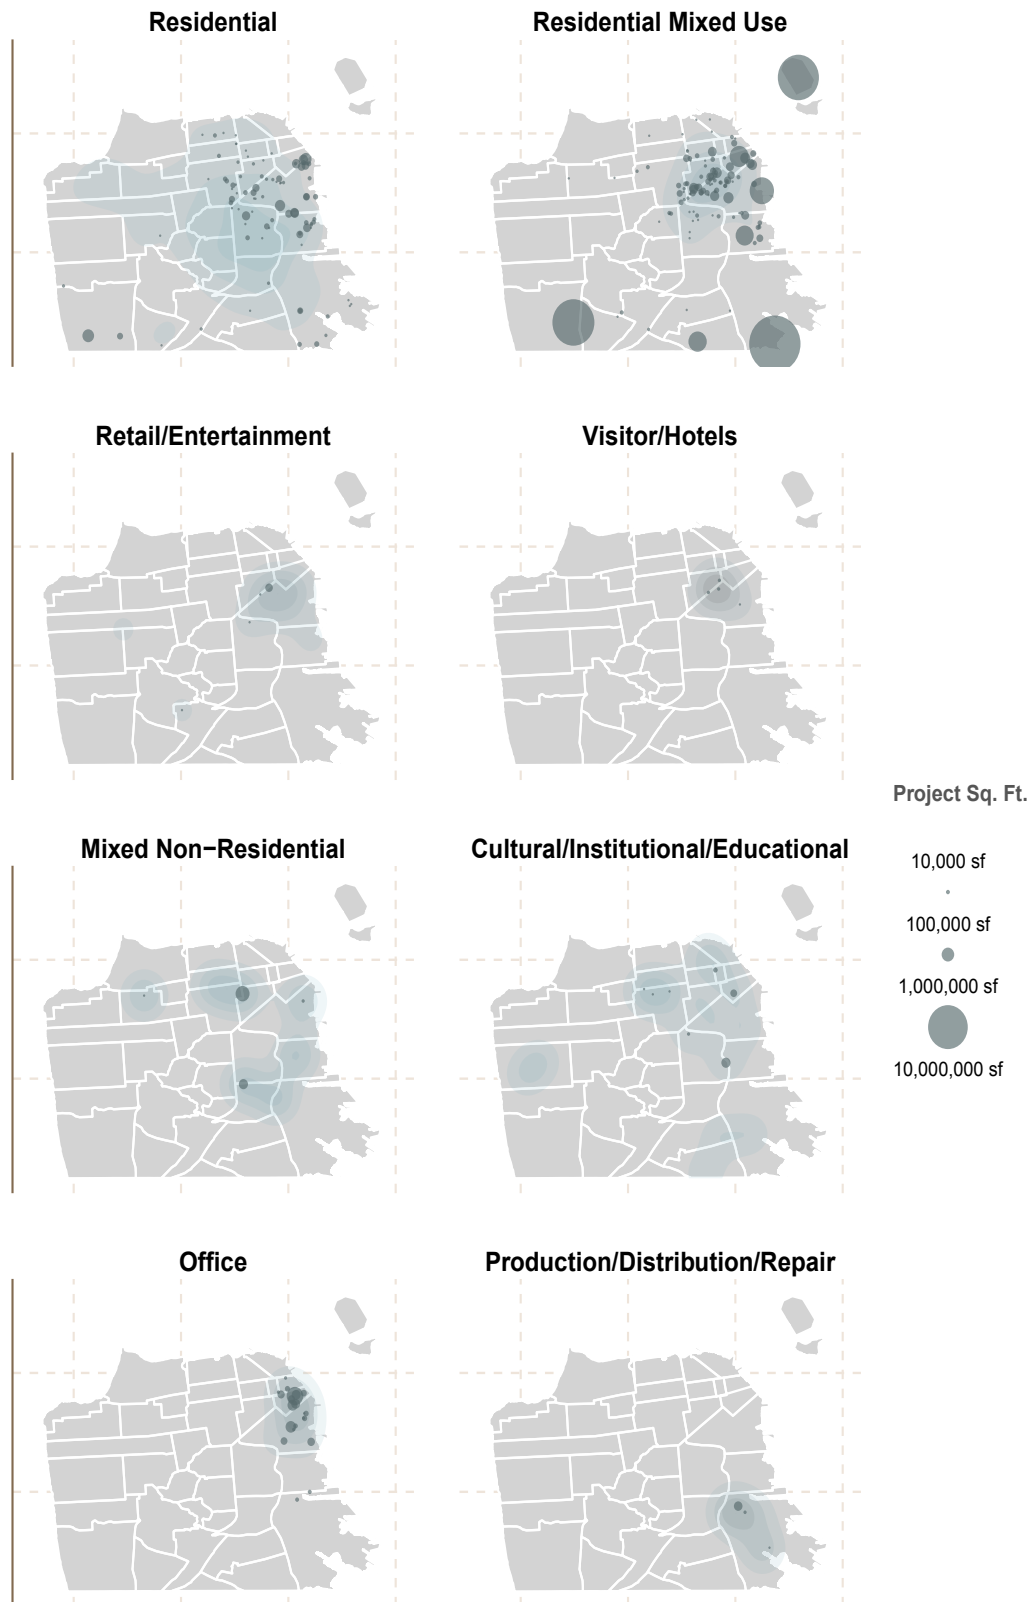

The Relevance of the Pipeline

The pipeline serves as a barometer of development trends in the medium to long term time horizon. It illustrates the location and scale of current and proposed future construction and reveals where new land uses are being established; it also records demolition and a partial listing of conversion of existing land uses. In sum, the pipeline provides a short- to medium-term picture of changing land uses, specifically tracking the changes to the city's housing stock and commercial uses. This report is meant to be a short overview.

Accuracy and Timeliness

The pipeline is compiled and consolidated from different data sources and is subject to errors due to varying accuracy and currency of original sources. The data in this report is pulled from original sources current through June 30, 2014. While we make an effort to consolidate multiple permits for different components of the same project from different agencies, it is not possible to validate the accuracy of all projects. Should you find inaccuracies and omissions, please e-mail your comments to aksel.olsen@sfgov.org.

Map 1. General Overview of Magnitude and Location of Development, by Major Land Use Type

THE DEVELOPMENT PIPELINE

There are currently 894 projects in the pipeline. Of these, 74 percent are exclusively residential and 17 percent are mixed-use projects with both residential and commercial components. Only 8 percent of projects are non-residential developments. Map 1 (left) gives the general location and magnitude of this development across is many stages.

A net total of 50,700 new housing units would be added to the city's housing stock according to current data. This is high relative to historical numbers and is largely due to the filing and entitlement of applications during the past five years for new large scale, long term development programs for Parkmerced, Treasure Island and the Bayview Waterfront. These projects, as well as their expected development over the course of decades must be kept in mind when considering the overall totals. The vast majority of pipeline projects, however, are small scale consisting of one to three units. The number of new projects slowed down during the Great Recession of 2007-2009 and beyond, but has since recovered in earnest as evidenced by both new project applications as well as the construction of projects with "older" entitlements. The "hot spot" for much of this development is Market Street at various sections of it. While this may seem a response to the recent acceleration of technology companies locating in the area, many development projects here predate the last recession, during which they were idle.

Projects by Overall Status

Table 1 breaks down projects, housing units and non-residential space by planning stage. First are non-entitled projects. A number of projects file building permit applications even as their projects have not cleared planning entitlements. The second major group include entitled projects; those which have completed the planning process and obtained necessary approvals. These are then divided into different stages of the building permitting process. Table 1 shows the following:

- Around 21 percent of all projects, representing 5,900 net added housing units and 5,400,000 sq. ft. of commercial space, are under construction.
- Around 20 percent of projects (with another 4,600 net units and 1,9 million sq. ft. of commercial space) have received building permit approvals. As of the time of writing, some may have moved to the construction phase.
- Around one in three projects (including 1,400 net new units and an net loss of 50,000 sq ft of commercial space) have filed building permit applications with the Department of Building Inspections. A small number of projects have filed applications but have yet to receive planning approvals.
- One in eight projects and 55 percent of the units and 37 percent of the non-residential space have received Planning Department approvals. These projects now must secure building permits.

Table 1. Residential and Commercial Pipeline, by Pipeline Status and Land Use Category

Entitlement Status	Status	Total No. of Projects	Net Housing Units	Net Comm'l Sq. Ft.	Net Commercial Gross Square Footage

- Twelve percent of projects, representing 8,800 units and 4.3 million commercial square feet are under initial Planning Department review.

Amount and Type of Net New Commercial Space

Projects in the current pipeline as noted also represent a potential net addition of 17.8 million sq ft of commercial development that would result in the

following land use inventory *changes*:

- 11.6 million sq ft of office space
- 2.9 million sq ft of retail space
- 850,000 sq ft of visitor-serving uses, such as hotels or hostels.
- 1.6 million sq ft of cultural, institutional, educational (CIE), and 1.8 million sq ft of medical space

Figure 1. Residential Pipeline Size Distribution, by Neighborhood

Note:
The three largest projects (Candlestick, Parkmerced, Treasure Island) are not included in the data behind this chart for readability.

- An overall loss of around 300,000 sq ft of space for production, distribution and repair (PDR).

Location of New Development

Table 2 shows the three most active areas for residential development include Bayview/Hunter's Point/Candlestick (where the Bayview Waterfront Project is located), Treasure Island and Parkmerced. All these projects have now been entitled. Full realization of these three projects will be decades into the future. These three areas would account for around 25,800 net units or about half of all net

additional units in the pipeline. (See Map 3 for area boundaries used.)

Other areas with active residential development include Downtown, Market & Octavia, and Rincon Hill.

On the commercial side, more than 90 percent of the new space would be added in the Bayview/Candlestick, Downtown districts, Mission Bay, and Transbay areas. Of these, the bulk of this space would take place in Bayview and Downtown C-3 districts.

Figure 2. Residential Pipeline Size Distribution, by Zoning Category

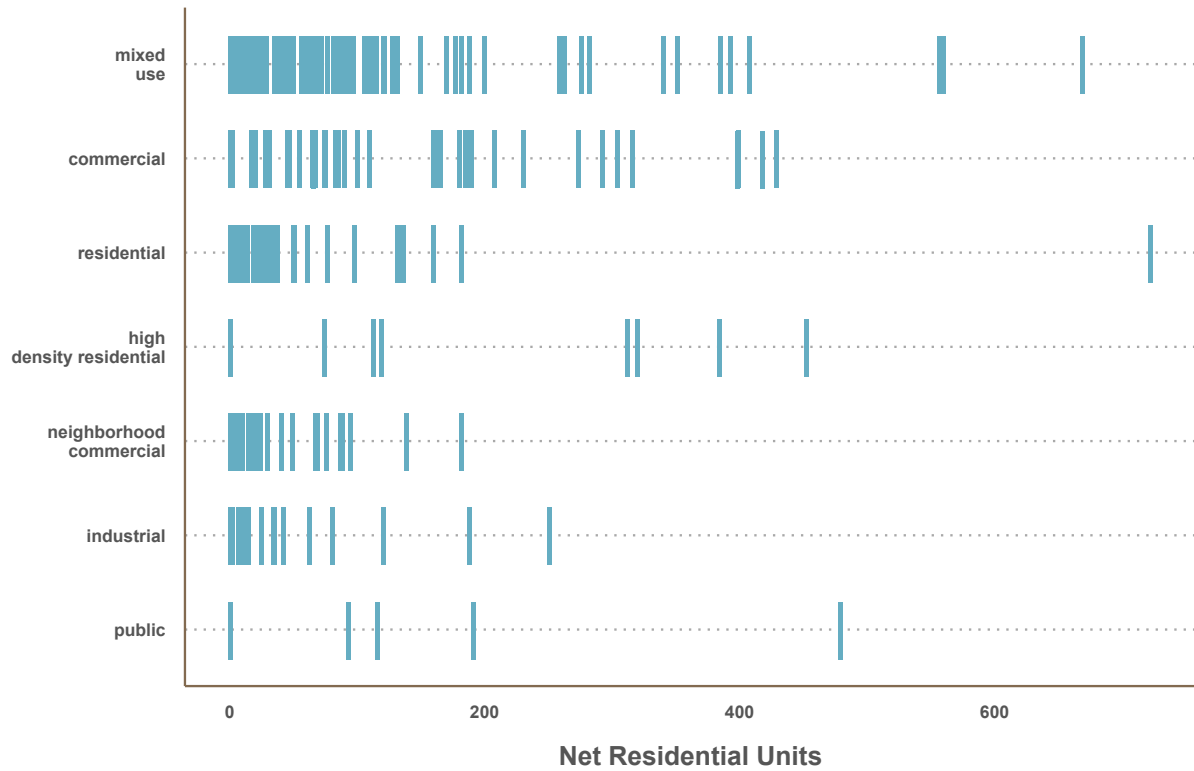

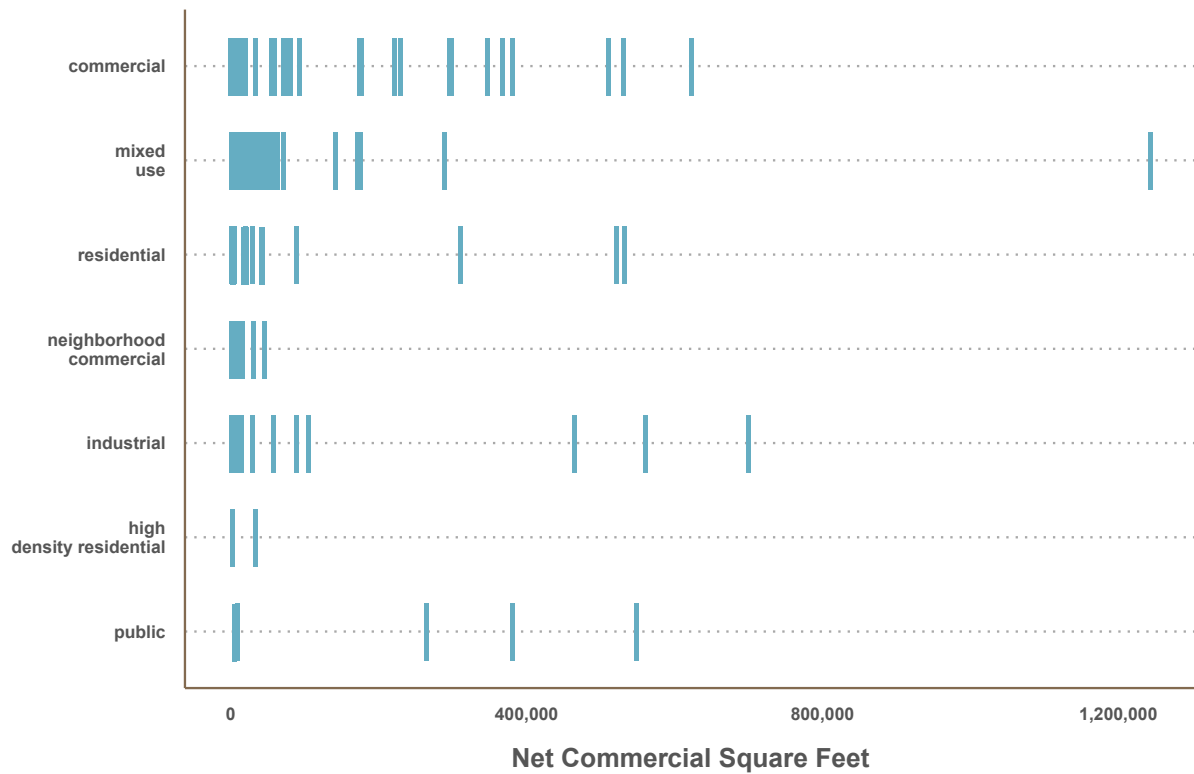

Figure 3. Non-Residential Pipeline Size Distribution, by Zoning Category

Note: Figure 2 and Figure 3 show each project plotted along an axis showing project size, by general zoning type. Projects plotted are truncated to the 99th percentile for readability.

It is perhaps worth noting how geographically concentrated development is, for both residential and commercial uses. In both cases, the majority of potential development would happen in a handful of projects in a handful of districts.

Pipeline Projects by Current Zoning Category

There is considerable variation on project sizes between--but also within--zoning district categories. Some zoning districts display similarly typed

and sized projects, while others are host to a great variety of project sizes and types.

Residential Pipeline

Figure 2 and Figure 3 give details on the size distribution for residential and non-residential projects, respectively, using plots where the position of each vertical bar represents the size of a development project, measured in square feet (a more rightward position means a larger project).

Per the top panel, the largest projects are found in

Table 3. Residential and Commercial Pipeline by Generalized Zoning Category

District Type	Simplified Zoning	Projects	Net Units	Net Gross Sq. Ft.	Cult., Inst., Educ.	Medical	Office	Prod., Dist., Repair	Retail	Visitor

mixed use, commercial and residential zone classes. While these projects have large projects, there is tremendous variation *within* these districts as well, as seen by the distance between the vertical lines. Projects in residential districts, on the other hand, are far more evenly sized, with the vast majority of projects consisting of fewer than 5 units. In the residential districts, there are a number of projects substantially larger than the rest, as seen from the outliers.

The lower panel analogously shows the size distribution for commercial projects, with lands zoned “public” accounting for the largest sizes, but note that this includes only a handful of projects.

Table 3 also shows the overall pipeline distribution by zoning categories, but with more detail. The vast majority of the residential pipeline falls on four land zoning classes: Public, Residential, Mixed Use, and Commercial. Two large projects are situated on parcels classified as “Public Land”: the Bayview Waterfront project, most of which is at Candlestick Point, and the Treasure Island redevelopment project.¹ These projects could add more than 18,900 units.

Residential projects on *residentially* zoned lots, representing the largest number of projects, account for 9,900 units, or the second largest class. Two thirds of these units, however, are in the Parkmerced redesign project and a couple of large San Francisco Housing Authority projects (one in the Potrero Hill area, the other on Sunnysdale Ave as part of the Hope SF program). The remainder of projects on residentially zoned parcels are relatively small with about a quarter of projects being single family housing projects. Small scale projects of one to nine units account for some 90 percent of the residential projects. Only a handful are larger and thus account for the majority of units.

The mixed use districts, a diverse group ranging from Eastern Neighborhoods districts to Chinatown, account for 10,500 units in 215 projects.

Residential projects on downtown commercial zoned lots would add 6,000 new units in 60 projects, although the count here also includes commercial only projects.

¹ Both the Bayview Waterfront and Treasure Island projects entail reclassification of zoning to new categories; however for the purposes of this report, they are still counted in the “Public” category they were predominantly located in as the entitlement proceedings began.

Another 1,800 units are pending on industrially zoned lands. About a third of these projects are mixed use projects with a commercial component. The added residential units in industrial areas are typically accompanied by loss of PDR space and addition of retail space (see Table 5).

Projects in neighborhood commercial districts would add 1,000 units in 44 projects.

Also of note, the high-density, transit-accessible downtown neighborhoods of Rincon Hill and Transbay which account for a fraction of one percent of the city’s land area, nonetheless account for more than four percent of all units in the pipeline in a handful of projects. These projects would add 1,800 units.

In contrast, residential projects in the low-density residential (RH) districts are by per zoning requirements relatively small scaled, in-fill developments, accounting for some 44 percent of proposed projects but just 2 percent of the total units (or 677 net units) in the pipeline. Projects on RM-zoned (multi-family) lots, in turn, account for 9 percent of projects and 18 percent of units, again largely because of a large project, the Parkmerced re-design project. In terms of land area, residential zoning districts form the largest group, comprising 46 percent of the city land area.

Commercial Pipeline

Non-residential development is predominantly allowed in commercial and mixed use districts²; thus the majority of commercial space are proposed to be added in these land classes.

The commercial pipeline (counting by project type, not zoning district) in general is characterized by 72 projects, but also 156 mixed use projects which contain both residential and non-residential components. The commercial component in the 156 mixed use district projects are, in general also small, with half of projects being smaller than 5,000 gross square feet, respectively. (Some of these projects in mixed use *districts* are exclusively residential.)

The largest concentration of potential commercial development is in a small number of projects classified under public zoning³. Development here would

² Some institutional uses are allowed in residential districts, such as day care and residential care. Further, P-zoned properties are occasionally developed.

³ See Footnote 1.

add some net 6.9 million square feet, or 43 percent of all proposed commercial development, in just eight projects. The largest of these proposed developments is the Bayview Waterfront Project which would add millions of commercial square feet.

Downtown Commercial districts account for a sizable concentration of non-residential development, with 2.7 million square feet in 56

projects. The mixed use districts account for a larger number of projects (even if this count may include projects that are exclusively residential) totalling 3.1 million square feet. Industrial districts would add another 3 million square feet. Remaining districts account for only a minor portion of non-residential development.

Table 4. Projects by Neighborhood and Building Size

Notes:

/1/ Housing unit counts are not rounded.

/2/ As the table categorizes by building size, numbers here represent total units as opposed to net units (subtracting replaced units), for which reason the unit count is higher than in other summary tables.

Figure 4. Residential Pipeline, by Status & Building Size

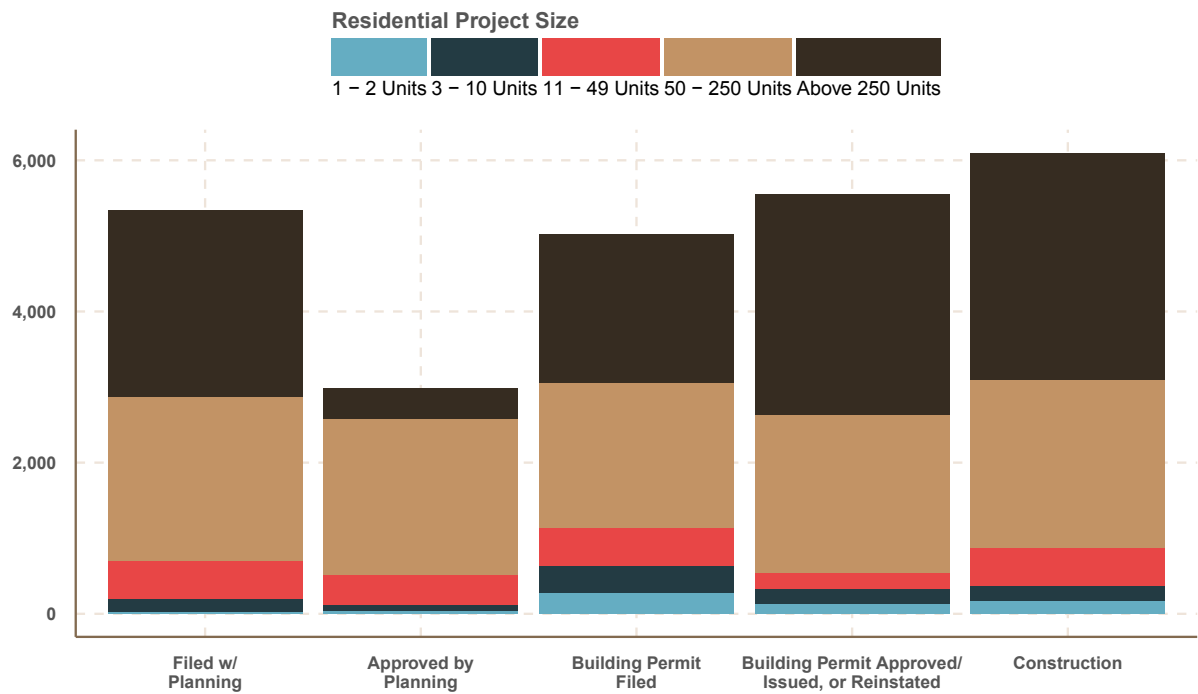

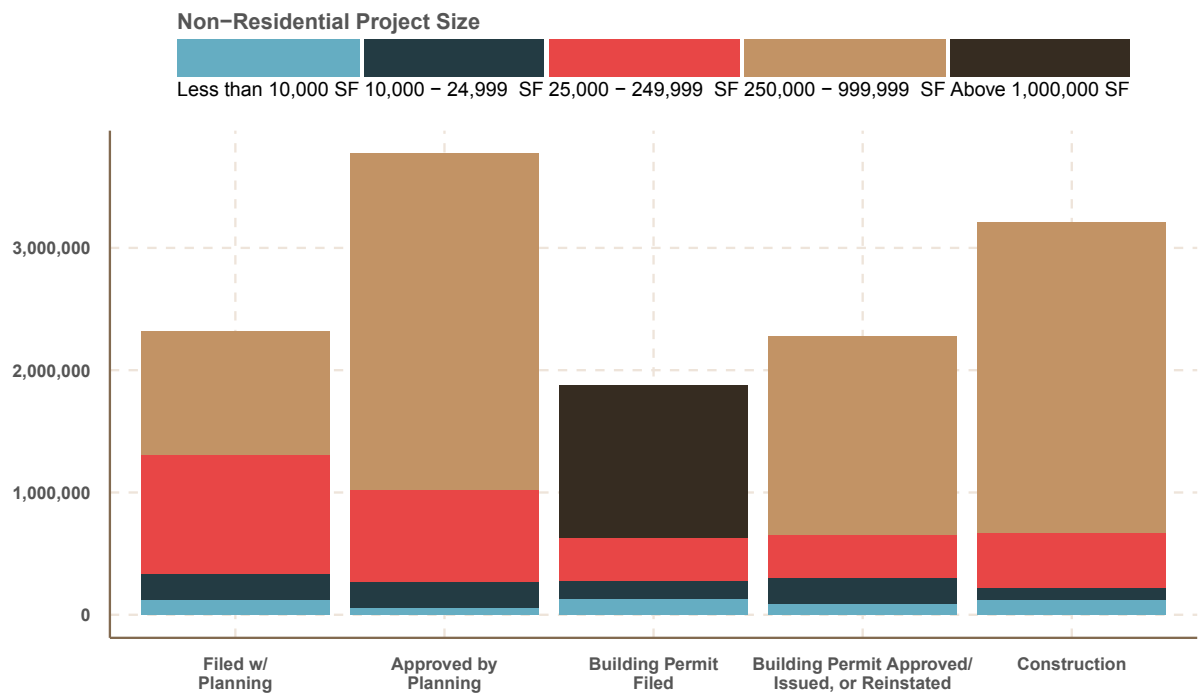

Figure 5. Non-Residential Pipeline, by Status & Building Size

High density residential districts will see some loss of commercial square footage as some of these spaces are converted to residential uses

Also of note the UCSF hospital project in Mission Bay is currently undergoing construction, expected to be done early 2015.⁴

Residential Pipeline by Project Size

Table 4 shows the residential pipeline by neighborhood, and offers detail on the project size. In most cases this measures the number of units in the building. However, a handful of projects include more than one building thus making this accounting an approximation.

Project sizes vary by area. Thus we see that, for instance, Downtown will get the bulk of its units in large projects (50-99 units, 100-249 units, above 249 units). This is also the case for areas like Market Octavia, Showplace Square, and in particular the Transbay area and Rincon Hill. Conversely, for Inner Sunset, the largest addition come in projects of two to nine units and single family projects. For the city as a whole, roughly three out of every four units come in a relative small number of projects. This implies most areas of the city have 'modest' amounts of development, given its relative concentration.

By the same token, if we sum the units of the bottom half of all pipeline projects would contribute 3,500 units, or seven percent of the total number of pipeline units. Summing just the five neighborhoods with the biggest number of proposed units yields some 63 percent of all proposed development.

Perhaps except for Parkmerced, development in residentially zoned areas in the western part of the city is limited in scope and consists chiefly of small-scale in-fill projects. The majority of units, and the vast majority of projects are in buildings of 1, or 2 to 9 units.

Figure 4 on page 10 shows the residential pipeline by building size and pipeline status. The residential pipeline shows that:

- Of the 6,000 units with building permits approved or issued, five out of every eight units

⁴ State projects are not subject to Planning Department review and is thus not a part of the standard permit stream this reports build on. The project was added manually to the construction list in early 2014.

are in buildings of 250 units and above, underlining the large scale of the near future cohorts of residential projects.

- Only three percent of the residential pipeline will be in buildings with nine units or less across all entitlement stages.
- Single family homes constitute a fraction of one percent of the total units in the pipeline.

Project Size and Status of Development

Per Figure 4 and Figure 5, there is some variation in project size by stage of development. Currently, a sizeable share of residential construction falls in the largest size category, reflecting in part that a significant number of large projects have been entiled for years and construction deferred during the Great Recession. Once economic conditions improved, these projects entered construction. The pattern on the non-residential side is somewhat less "top heavy," with bigger projects found in earlier stages of development, likely attributable to the focus on residential rather than commercial development in recent years.

Conversion of Commercial to Residential Use⁵

There are 49 projects in the current pipeline database proposing demolition or conversion of existing production, distribution and repair-use (PDR) buildings to residential use. The corresponding figure for the conversion of office space is 27 projects. These projects, adding up to 3,600 units and 3,100 units, respectively, comprise about one in seven of the total number of residential units in the pipeline.

Conversion of PDR Space

Table 5 provides a measure of how many units are produced relative to the lost PDR space.

- If the pipeline were developed as proposed, about 800,000 sq ft of PDR space would be lost to conversion or demolition.⁶ It would be replaced

⁵ Numbers represented here differ from those reported in Table 1. Table 1 represents the net change of all projects whereas numbers here are limited to the specific projects representing conversions or demolitions resulting in a net loss of PDR space (Table 5) and office space (Table 6).

⁶ Table 5 shows only projects that include the conversion or loss of PDR space to residential use. Other, separate projects proposing to add PDR space not involving conversion or demolition of PDR space are not counted in this table. Table 1 shows a net loss of 319,000 sq ft as it is a net tally of all projects that add, convert or demolish PDR

Table 5. PDR Space Conversion to Residential Use, by Planning District

Neighborhood	Projects	Percent	Net Units	Percent	PDR Net	Percent
Central Waterfront	11	22%	1,260	34%	-317,000	39%

with residential units (3,600) and/or other commercial uses.

- Most of the PDR to residential conversions are found in Central Waterfront, Showplace/Potrero Hill and East SoMa districts, accounting together for nearly three out of four converted square feet. The loss of PDR space in these neighborhoods would in turn bring in 2,200 net new housing units.

Conversion of Office Space

- Approximately 1 million sq ft of office space is proposed to be converted to residential and/or other commercial use. This loss of office space is mainly taking place in the northeastern part of the city due to the concentration there. Table 6 shows that Market Octavia could see a loss of 600,000 square feet of office. This is predominantly due to the conversion of the Triple-A buildings to residential use. For the neighborhood as a whole, 1,400 new units could result from conversion.
- Nearly all units replacing office uses are in

space while this table only counts the loss side of the ledger.

mid- to high-rise residential structures of 20 to 500 housing units in high density zoning districts. These projects are mostly concentrated in the eastern half of the city: Rincon Hill, East SoMa, Showplace Square & Potrero Hill, Transbay, Mission and Downtown.

- These conversions of a number of *individual* office buildings reported here notwithstanding, taken together with other commercial developments in the pipeline as shown in Table 1, the overall result would still be a net addition of office space. As reported in Table 1, the net addition of office amounts to 11.6 million sq. ft. citywide.

INCLUSIONARY HOUSING

The San Francisco Planning Code § 415.5 contains the provisions for the Inclusionary Affordable Housing Program, requiring developments with 10 units or more to contribute to the development of housing affordable to middle-income households in the City.⁷ Project sponsors can mainly fulfill this requirement either by contributing to a fund, providing units on-site, dedicating land, or building on a different site.

⁷ This data was last updated at the end of the first quarter, 2014.

Table 7. Inclusionary Housing Pipeline, by Type

Type	Declaration	Projects	Total Units	BMR On-Site	BMR Off-Site
Parent	On Site Provision	50	6,241	906	-
	In Lieu Fee	27	2,703	-	404 ¹
	Off site (Future BMR)	1	725	-	164
	Land Dedication	2	353	-	-
	Combination	8	6,706	370	36
	Undeclared	10	1,172	-	139 ²
Child	Stand-Alone BMR	3	203	-	-
Grand Total		101	18,103	1,276	743

Notes:

/1/ BMR unit counts are estimated at 15% of the Total unit count, assumed to be off site.

/2/ BMR unit counts are estimated at 12% of the Total unit count, assumed to be off site. Some of these may be on-site once a declaration is issued.

The affordable housing pipeline can be thought of in stages: First, affordable housing production per the inclusionary program is a function of fees on market rate housing development and/or direct provision of affordable units. Such market rate development can

Map 2. Inclusionary Affordable Housing Pipeline, By Type and Size

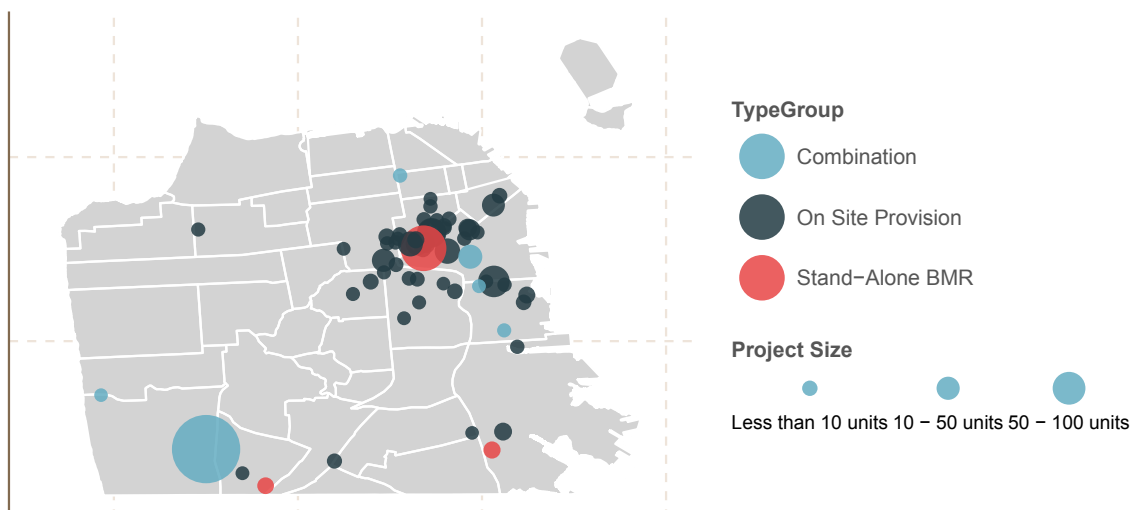

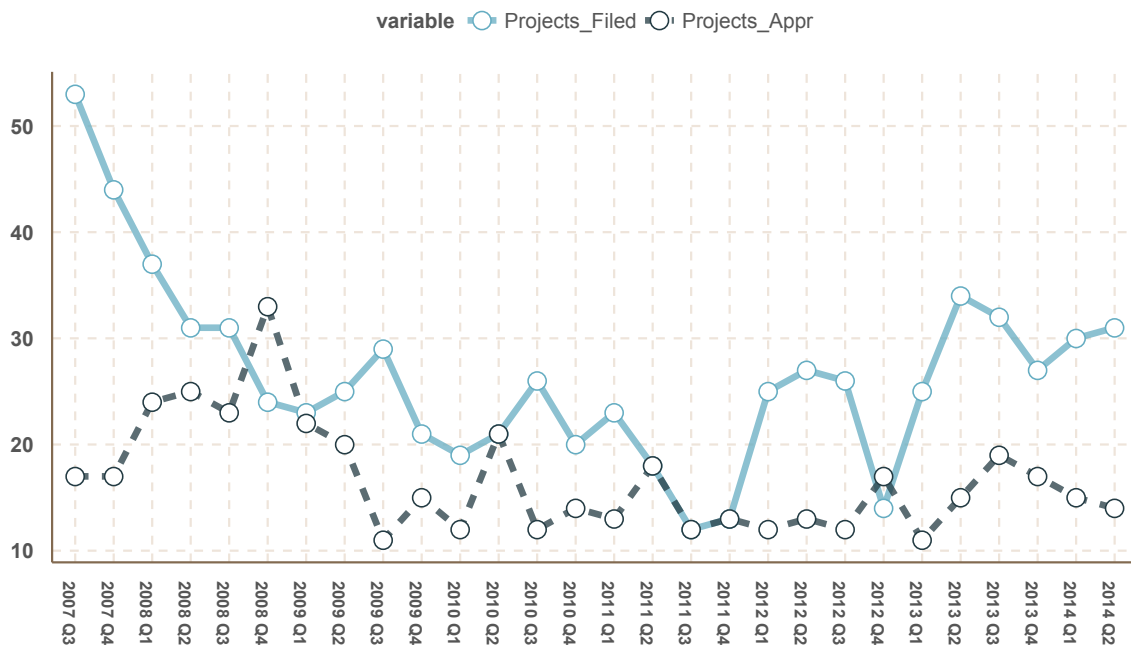

Figure 6. Pipeline Over Time: Projects Filed / Approved

can be thought of as “parent projects,” leading to derived units now (on site) or later (through fees paid). The second stage, then, is when monies are pooled, a site identified, and the affordable housing built, typically by a non-profit developer. To stay with the parent analogy, these downstream projects may accordingly be thought of as “children.” For economy of scale reasons, there are relatively few—currently three—such projects. Conversely, 50 projects (Table 7, first row) will provide on-site affordable units. These projects, along with the BMR stand-alone projects, are shown on Map 2.

RECENT ACTIVITY

Project Application Filings During q2 2014

A total of 31 planning applications were filed in the first quarter of 2014, slightly lower than the 34 projects filed the same quarter a year before. Corresponding to these 31 projects is a count of 400 residential units and 529,000 sq. ft. of non-residential development.

Projects approved during any given quarter shows a time lag relative to the projects filed curve. A project is often approved in another quarter than the one in which it was filed, particularly for projects needing environmental review and/or conditional use authorization, while others are abandoned altogether before approval.

A few of the larger projects filed during the second quarter of 2014 include:

- At 610-620 Brannan Street, the proposed project would demolish a paved lot and remove three single-story buildings to erect an approximately 160 ft. tall, 620,000 sq. ft. office building, with public open space, PDR uses, street-facing retail, and a subsurface parking garage.
- At 1028 Market St, the project would demolish the existing two-story commercial building and construct a 13-story mixed use building with 12 floors of residential use above ground floor retail, as well as two levels of below-grade parking. The new 120 ft. building would contain 186 dwelling units and approximately 9,675 gross square feet of retail space.

Completed projects during the past four quarters

Table 8 shows that the past four quarters resulted in a net addition of 2,940 units to the city's housing stock, while there was a slight loss of non-residential space. The median time to completion for these projects from the first filing was 43 months. Projects less than 10,000 sq. ft. had a median completion time of 30 months. Such projects tend to be less complex than larger ones, as evidenced in completion times as sizes increase : Those between 10,000 and 24,999 sq. ft., 25,000 - 249,999 sq. ft. had median completion times of 57 and 71 months, respectively.

The largest group, sized 250,000 - 999,000 sq. ft. similarly took 71 months from the initial filing to project completion.⁸ These times may well reflect a strong recession effect (project sponsors waiting due to financial uncertainty) on the current completion cohort, although the smaller projects are by now predominantly filed after the slowdown ended.

Figure 7 details the relationship between project size and time to completion. All other things equal,

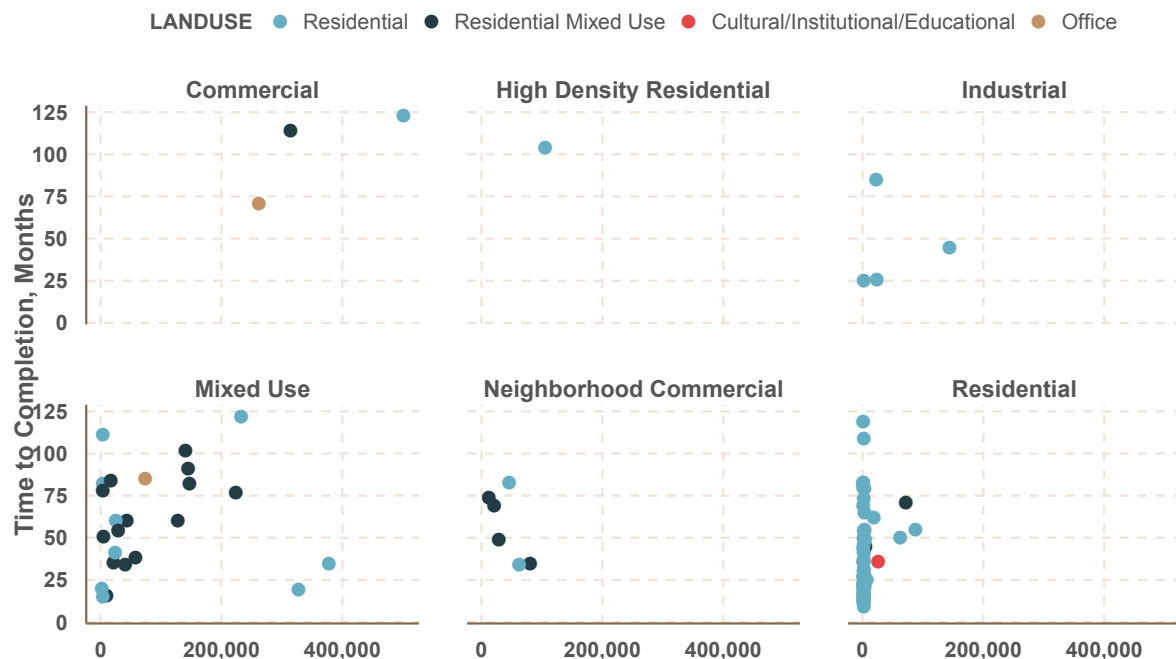

⁸ Certificates of Final Completions will occasionally lag the actual completion time and/or may be recorded on a different permit application finalizing work authorized per an older permit, so these figures should be taken as approximations.

Table 8. Projects Completed Past Year, By Use Type

Land Use	Projects	Net Units	Net Comm'l Sq. Ft.
Mixres	21	1,160	-6,000
Resident	81	1,800	-156,000
CIE	1	0	26,000
MIPS	2	-20	309,000
Grand Total	105	2,940	173,000

bigger, more complex projects can be expected to take longer to complete. They need more layers of review and refine, and financing may be more uncertain. The chart shows that this relationship is much stronger in some types of zoning districts than others. The association one might expect between increasing completion time and project size, per this chart, is not strongly borne out by the data for residential districts. The connection is a little stronger for mixed use projects, which may differ both in terms of the neighborhoods they are located in as well as the type of financing available. For projects in neighborhood commercial districts, the smaller projects took the longest to complete.

DATA DICTIONARY

PROJECT LOCATION	
Block Lot	Concatenated 4-digit assessor block + 3-digit assessor's lot Numbers
Address	Name and address of project.
Planning Neighborhood	Areas related to current planning efforts and roughly to city neighborhoods.
PROJECT STATUS	
Under Construction	Project is under construction.
BP Approved	DBI approved building permit.
BP Issued	Project sponsor has picked up approved building permit (proxy measure of under construction)
BP Reinstated	DBI reinstates a lapsed building permit (lapses after 1 year with no activity).
BP Filed	Application for building permit filed with DBI.
PL Approved	All Planning actions approved.
PL Filed	Project application filed with the Planning Department
Bestdate	The date of the most recent action leading to the BESTSTAT value, I.e., a project's current pipeline status (e.g., date building permit application is filed if BESTSTAT = BP Filed).
DEVELOPMENT PROFILE	
Units	Net total dwelling units.
Net Comm'l Sq. Ft	Nonresidential gross square feet (GSF). Best interpreted as net new useable GSF with demolition of existing space subtracted (not total project gsf).
CIE	CIE or Cultural, Institutional, Educational includes educational services, social services, museums, zoos, and membership organizations.
MED	Medical includes health services offices and hospitals and laboratories throughout the City.
MIPS	MIPS is largely any activity where information is the chief commodity that is processed (managerial, information, professional, business services, multi-media).
PDR	PDR or Production, Distribution and Repair includes automobile and other repair services throughout the City, plus construction, transportation, communications, utilities, agriculture mining, manufacturing, wholesale trade, and motion picture production distribution, and services located outside of the downtown, transbay, and Northeast Districts. Does not include undeveloped or vacant land area used for PDR activities such as construction yards or open storage areas.
RETAIL/ENT	Retail Includes retail trade, amusement and recreation services, and personal services located throughout the City.
VISITOR	Visitor (or Hotel) includes hotels and other lodging located throughout the City.
Land Use	<p>This field summarizes in one word what type of project is being proposed. Apart from the commercial categories listed, this field includes</p> <ul style="list-style-type: none"> - Mixres (when both commercial and residential uses are proposed) - Mixed (when no residential use present and when multiple commercial uses are proposed and not one is dominating (>80% of commercial square feet) - Resident is used to denote any residential project where there is no commercial component.

Quarter 2, 2014
