PROJECT DESCRIPTION:
The project site is a through lot located on a block bounded by Third, Illinois, 18th, and 19th Streets in the Potrero Hill neighborhood. The proposed project would include demolition of an existing commercial fueling facility; merging two lots (006 & 021) into a single lot; and, construction of an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces.

The following Certificate of Determination for the 720 & 740 Illinois Street and 2121 Third Street project supersedes the previous determination issued on November 9, 2010 for a project that proposed to construct 62,516 square feet of residential uses that would include 70 residential units and 52 parking spaces on the lot facing Illinois Street and the remaining new lot facing Third Street was proposed to be dedicated to the City to comply with affordable housing requirements under Planning Code Section 419.5 Alternatives to the Inclusionary Housing Component.

EXEMPT STATUS:
Exempt per Section 15183 of the California Environmental Quality Act (CEQA) Guidelines and California Public Resources Code Section 21083.3

REMARKS:
(See next page.)

DETERMINATION:
I do hereby certify that the above determination has been made pursuant to State and Local requirements.

BILL WYCKO
Environmental Review Officer

Exemption from Environmental Review

CASE NO. 2010.0094E
720 & 740 Illinois St and 2121 Third St

REMARKS:

California Environmental Quality Act (CEQA) State Guidelines Section 15183 provides an exemption from environmental review for projects that are consistent with the development density established by existing zoning, community plan or general plan policies for which an Environmental Impact Report (EIR) was certified, except as might be necessary to examine whether there are project-specific effects which are peculiar to the project or its site. Section 15183 specifies that examination of environmental effects shall be limited to those effects that: a) are peculiar to the project or parcel on which the project would be located; b) were not analyzed as significant effects in a prior EIR on the zoning action, general plan or community plan with which the project is consistent; c) are potentially significant off-site and cumulative impacts which were not discussed in the underlying EIR; and d) are previously identified in the EIR, but which are determined to have a more severe adverse impact than that discussed in the underlying EIR. Section 15183(c) specifies that if an impact is not peculiar to the parcel or to the proposed project, then an EIR need not be prepared for that project solely on the basis of that impact.

This determination evaluates the potential project-specific environmental effects peculiar to the 720 & 740 Illinois St. and 2121 Third St. project described above, and incorporates by reference information contained within the Eastern Neighborhoods Rezoning and Area Plans Final EIR (Eastern Neighborhoods EIR) (Case No. 2004.0160E; State Clearinghouse No. 2005032048). Project-specific studies summarized in this determination were prepared for the proposed project at 720 & 740 Illinois St. and 2121 Third St to determine if there would be significant impacts attributable to the proposed project. These studies examined that project’s potential environmental effects on shadow and noise.

This determination assesses the proposed project’s potential to cause environmental impacts and concludes that the proposed project would not result in new, peculiar environmental effects, or effects of greater severity than were already analyzed and disclosed in the Eastern Neighborhoods EIR. This determination does not identify new or additional information that would alter the conclusions of the Eastern Neighborhoods. This determination also identifies mitigation measures contained in the Eastern Neighborhoods that would be applicable to the proposed project at 720 & 740 Illinois St. and 2121 Third St.. Relevant information pertaining to prior environmental review conducted for the Eastern Neighborhoods is included below, as well as an evaluation of potential environmental effects.

Background

After several years of analysis, community outreach, and public review, the Eastern Neighborhoods Plan was adopted in December 2008. The Eastern Neighborhoods was adopted in part to support housing development in some areas previously zoned to allow industrial uses, while preserving an adequate supply of space for existing and future production, distribution, and repair (PDR) employment and businesses. The Eastern Neighborhoods also included changes to existing height and bulk districts in some areas, including the project site at 720 & 740 Illinois St. and 2121 Third St..

During the Eastern Neighborhoods Plan adoption phase, the Planning Commission held public hearings to consider the various aspects of the proposed area plans, and Planning Code and Zoning Map
amendments. On August 7, 2008, the Planning Commission certified the Eastern Neighborhoods EIR by Motion 17659\(^1\) and adopted the Preferred Project for final recommendation to the Board of Supervisors.\(^2\)

In December 2008, after further public hearings, the Board of Supervisors approved and the Mayor signed the Eastern Neighborhoods rezoning and Planning Code amendments. New zoning districts include districts that would permit PDR uses in combination with commercial uses; districts mixing residential and commercial uses and residential and PDR uses; and new residential-only districts. The districts replaced existing industrial, commercial, residential single-use, and mixed-use districts.

The Eastern Neighborhoods Final EIR is a comprehensive programmatic document that presents an analysis of the environmental effects of implementation of the Eastern Neighborhoods Rezoning and Area Plans, as well as the potential impacts under several proposed alternative scenarios. The Eastern Neighborhoods Draft EIR evaluated three rezoning alternatives, two community-proposed alternatives which focused largely on the Mission District, and a "No Project" alternative. The alternative selected, or the Preferred Project, represents a combination of Options B and C. The Planning Commission adopted the Preferred Project after fully considering the environmental effects of the Preferred Project and the various scenarios discussed in the Final EIR.

A major issue in the Eastern Neighborhoods rezoning process was the degree to which existing industrially-zoned land would be rezoned to primarily residential and mixed-use districts, thus reducing the availability of land traditionally used for PDR employment and businesses. Among other topics, the Eastern Neighborhoods EIR assesses the significance of the cumulative land use effects of the rezoning by analyzing its effects on the City’s ability to meet its future PDR space needs as well as its ability to meet its housing needs as expressed in the City’s General Plan.

As a result of the Eastern Neighborhoods, the project site has been rezoned to Urban Mixed Use (UMU). The proposed project and its relation to PDR land supply and cumulative land use effects is discussed further on page 4, Land Use. The 720 & 740 Illinois St. and 2121 Third St. project site, which is located in the Potrero Hill Area of the Eastern Neighborhoods, was designated and envisioned as a site with a building up to 68 feet in height and containing a mix of uses.

Individual projects that could occur in the future under the Eastern Neighborhoods Rezoning and Area Plans would undergo project-level environmental evaluation to determine if they would result in further impacts specific to the development proposal, the site, and the time of development and to assess whether additional environmental review would be required. This determination concludes that the proposed residential project at 720 & 740 Illinois St. and 2121 Third St. is consistent with and was encompassed within the analysis in the Eastern Neighborhoods Final EIR. Further, this determination finds that the Eastern Neighborhoods Final EIR adequately anticipated and described the impacts of the proposed 720 & 740 Illinois St. and 2121 Third St., and identified the mitigation measures applicable to the proposed project. The proposed project is also consistent with the zoning controls for the project site.

---

Therefore, no further CEQA evaluation for the 720 & 740 Illinois St. and 2121 Third St. project is necessary.

Potential Environmental Effects
The Eastern Neighborhoods Final EIR included analyses of environmental issues including: land use; plans and policies; visual quality and urban design; population, housing, business activity, and employment (growth inducement); transportation; noise; air quality; parks, recreation and open space; shadow; archeological resources; historic architectural resources; hazards; and other issues not addressed in the previously issued initial study for the Eastern Neighborhoods project. The proposed 720 & 740 Illinois St. and 2121 Third St. project is in conformance with the height, use and density for the site described in the Eastern Neighborhoods and would represent a small part of the growth that was forecast for the Eastern Neighborhoods. Thus, the project analyzed in the Eastern Neighborhoods EIR considered the incremental impacts of the proposed 720 & 740 Illinois St. and 2121 Third St. project. As a result, the proposed project would not result in any new or substantially more severe impacts than were identified in the Eastern Neighborhoods EIR. The following discussion demonstrates that the 720 & 740 Illinois St. and 2121 Third St. project would not result in significant impacts beyond those analyzed and disclose in the Eastern Neighborhoods, including project-specific impacts related to land use, aesthetics, air quality, archeological resources, historic architectural resources, shadow, transportation, and noise.

Land Use
The Eastern Neighborhoods Rezoning and Area Plans re-zoned much of the city's industrially-zoned land in the Mission, Central Waterfront, East South of Market and Showplace Square/Potrero Hill neighborhoods. The four main goals that guided the Eastern Neighborhood planning process were to reflect local values, increase housing, maintain some industrial land supply, and to improve the quality of all existing areas with future development. The re-zoning applied new residential and mixed-used zoning districts to parts of the Eastern Neighborhoods currently zoned for industrial, warehousing, and commercial service use.

The proposed project would intensify uses in the project vicinity by constructing a new residential building, which would consist of an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces. However, the new land use would not have an effect on the character of the vicinity beyond what was identified in the Eastern Neighborhoods Final EIR. The proposed building is consistent with the height and bulk controls and the proposed uses are permitted within the Urban Mixed Use (UMU) District zoning controls. Further, the project is proposed on an in-fill site, and would not substantially impact upon the existing character of the vicinity and would not physically divide an established community.

The Eastern Neighborhoods identified an unavoidable significant land use impact due to the cumulative loss of PDR under Option C. Option C, which would result in less PDR-only land than Options A or B and would rezone more existing PDR land and displace more existing PDR uses than the other two options, would result in a clear mismatch between the supply of and demand for PDR land and building space, with neither adequate land nor adequate building space available with substantial changes in land use controls on Port land. The analysis also determined that a No-Project scenario would result in an unavoidable significant impact on the cumulative supply of land for PDR uses. As indentified in
Appendix D to Planning Commission Resolution 16727, a commercial fueling facility is not considered a PDR use. Since there is no PDR at the project site, the proposed project would not contribute to this impact because there would be no loss of PDR. However, because the UMU zoning designation for the project site allows certain PDR uses, the proposed construction of residential uses on the project site would preclude any future PDR uses.

In addition, Citywide Planning and Neighborhood Planning have determined that the proposed project is consistent with the Eastern Neighborhoods Final EIR and satisfies the requirements of the General Plan and the Planning Code. Therefore, the project is eligible for a Community Plan exemption.

**Cultural Resources**

**Archeological Resources**
Potential archeological impacts were identified in the Eastern Neighborhoods Rezoning and Area Plans Final EIR. Mitigation Measure 1-2: Properties with No Previous Studies applies to properties within the project area for which no archeological assessment report has been prepared or for which the archeological documentation is incomplete or inadequate to serve as an evaluation of potential effects on archeological resources under CEQA. The project site is located within the Properties with No Previous Studies mitigation zone and would require a Preliminary Archeological Sensitivity Study to be prepared by an archeological consultant with expertise in California prehistoric and urban historical archeology.

The Planning Department conducted an archeological assessment review of the project site and found that there is a possibility that archeological features associated with ship building/repair operations (1870s-1900) could be present within the project site fill matrix. If features and/or deposits associated with the 19th Century ship building facilities have research integrity and would be adversely affected by project activities, the project may have a potential adverse effect to an historical resource under CEQA. Therefore, implementation of Mitigation Measure 1 Archeological Resources - Accidental Discovery would reduce potential effects of the proposed project to archeological resources to a less-than-significant level.

**Historic Architectural Resources**
The subject property was surveyed in 2001 by the City of San Francisco as part of the Central Waterfront Cultural Resources Survey and assigned a National Register Status Code of “4D2,” or “may become eligible for the National Register as a contributor to a district.” The findings of the survey were endorsed by the Planning Commission on June 13, 2002 by Motion No. 16431. In 2007, the subject property was reevaluated to comply with revision to the status codes made by the California Office of Historic Resources.

This document is on file and available for review as part of Case File No. 2010.0094E at the San Francisco Planning Department, 1650 Mission Street, Suite 400.
Preservation. In the reevaluation, the subject property was assigned a new California Historical Resource Status Code of "5D2," or "contributor to a district that is eligible for local listing." Although the subject property is not included on the National or the California Registers, the previous survey findings for the property make it a "Category A" building (known historic resource) for the purposes of CEQA review by the Planning Department.\(^7\)

Based on previous survey findings, Planning Department staff believes that the subject building would qualify as a contributor to a potential historic district (Central Waterfront Historic District). The subject property was identified as having contextual significance as a small oil plant in the Central Waterfront Survey. Since the completion of the Central Waterfront Survey, the area surrounding the subject property has undergone some redevelopment, however, the site and the identified potential historic district still convey their contextual significance.

As discussed in the Eastern Neighborhoods Area Plans EIR, "[Central Waterfront] rezoning proposals expand residential-permitting zoning along Minnesota, Tennessee, Third and Illinois streets between Mariposa and 25th streets, as well as along 280 between Mariposa and 20th. The vast majority of this land is currently zoned Heavy Industrial (M-2). The rezoning proposals would expand residential-permitting zoning to 43 parcels containing known or potential historical resources, including 34 structures that are known historical resources." Adoption of the Eastern Neighborhoods rezoning proposals resulted in the zoning reclassification of the subject property from M-2 to UMU. The project site was identified in the Eastern Neighborhoods EIR as a potential historical resource in the Central Waterfront Historic District. The Eastern neighborhoods Rezoning Plan height limit increases for the Central Waterfront area were proposed along Third and Illinois streets, and in the southern portion of the plan area, between 22nd and 25th streets. The rezoning increased the height limits 15 feet or more for 53 known or potential historical resources in the Central Waterfront, which includes the 720 & 740 Illinois St. and 2121 Third St. project site.

An analysis of the potential for the Eastern Neighborhoods rezoning to result in potential adverse environmental effects on known and potential resources, indicated height changes would affect properties generally along Third Street as well as the blocks east of Iowa Street south of 23rd Street. Other areas indicated that could be affected by rezoning due to changes in permitted land uses or intensification of use are generally in the area between Mariposa, Indiana, Illinois and 22nd Streets as well as on Pier 70. Figure 36 on page 472 and Table 59 on page 474 of the Eastern Neighborhoods EIR, identifies the 720 & 740 Illinois St. and 2121 Third St. project site, along with surrounding known and potential historic resources, as having the potential to be impacted as a result of the rezoning.

As the demolition of a historical resource generally cannot be fully mitigated to a less-than-significant level, the impact of demolition of buildings that are identified as historical resources would be considered a significant and unavoidable impact of the proposed Eastern Neighborhoods Rezoning Plans project, because such demolition could be anticipated to occur as a result of development secondary to project implementation. Mitigation identified in Chapter V, Mitigation Measures, of the Eastern Neighborhoods EIR could in some cases reduce the nature of the impact, but it is assumed that demolition of historical resources could not be mitigated to a less-than-significant level.

\(^7\) Memorandum from Pilar La Valley, Preservation Technical Specialist, to Brett Bollinger, Planner, Major Environmental Analysis, October 21, 2010.
The existing commercial fueling facility on the project site has been identified as a contributor to a potential historic district (Central Waterfront Historic District), which was completed prior to the adoption of the Eastern Neighborhoods Rezoning Plan Area. While the immediate building context in the immediate project vicinity has a mixed visual character and variety of building heights, the proposed project is located within the boundary of a potential historic district (Central Waterfront Industrial District). Within the immediate surroundings, however, there are no other potential contributing resources; all the other properties on this block were built after the period of significance for the district and do not contribute to the historic context.

The Eastern Neighborhoods Plan EIR identified an unavoidable significant historical resource impact due to the potential loss of CEQA-defined historical resources. Future development projects that would be facilitated by the proposed changes to use districts and height limits in the Eastern Neighborhoods have the potential to cause substantial adverse changes in either (a) the significance of one or more of the historical resources identified in this analysis, or (b) the significance of one or more of the historic districts in which some of these resources are located. As noted above, substantial adverse changes that may occur include demolition, destruction, relocation or alteration of one or more resources, such that the historical significance or resource and/or the historic district in which it is located is “materially impaired.” Such an adverse change to a CEQA-defined historical resource would constitute a significant impact. Under the Eastern Neighborhoods Final EIR it was assumed that demolition of a historical resource could not be mitigated to a less-than-significant level and a Statement of Overriding Considerations related to the significant and unavoidable historical resources impacts was adopted as part of the EIR Certification and project approval on January 19, 2009.

The Statement of Overriding Considerations concluded, “As the demolition of a historical resource generally cannot be fully mitigated to a less-than-significant level, the impact of demolition of buildings that are identified as historical resources would be considered a significant and unavoidable impact of the proposed Eastern Neighborhoods Rezoning and Area Plans project, because such demolition could be anticipated to occur as a result of development secondary to project (Eastern Neighborhoods Rezoning Area Plan) implementation. Mitigation identified in Chapter V, Mitigation Measures (in the Eastern Neighborhoods Final EIR), could in some cases reduce the nature of the impact, but it is assumed that demolition of historical resources could not be mitigated to a less-than-significant level.”

“Demolition of individual structures secondary to project (Eastern Neighborhoods Rezoning Area Plan) implementation would not necessarily result in a significant adverse effect on a historic district within which buildings are located. However, for purposes of a conservative assessment, it is presumed that the demolition of one or more contributing resources to any of the existing or potential historic districts identified in the Eastern Neighborhoods Final EIR would constitute a significant impact that could not be mitigated to a less-than-significant level.”

As to the effects of the proposed new structure, given the surrounding context, the proposed massing is generally appropriate. Although the overall design of the new buildings lack references to either the industrial character of the potential historic district or to design elements from historic buildings within the district, it does not appear that the proposed project would result in a significant adverse impact to off-site historic resources due to its physical and visual separation from other contributing resources within the potential district. The loss of a single contributing building to the potential historic district
Exemption from Environmental Review

CASE NO. 2010.0094E
720 & 740 Illinois St and 2121 Third St

would represent a relatively small effect, in terms of the overall number of potential district contributors in the project vicinity. However, the effect on the potential district of demolition of a single contributing resource, not identified as important enough to be individually eligible for the California Register, would not be of a sufficient degree to disqualify the Central Waterfront Historic District, or any sub-area project site vicinity, from consideration for listing as a National or California Register-eligible historic district. With the loss of the project site commercial fueling facility building, the potential historic district would have an incrementally, but not substantially, diminished capacity to convey the sense of an industrial neighborhood.

As previously noted above, the building is not identified as individually eligible for the California Register, as it was not determined to be associated with events or persons of sufficient historic significance or to sufficiently embody distinctive characteristics of style, type, or period to warrant individual listing. As such, the proposed project’s demolition of a contributing resource would not have a significant impact on the Central Waterfront historic district. The project block does not contain any other buildings which are listed in the National or California Registers or designated as a San Francisco Historical Landmark. For this reason, the proposed project would not affect the historic setting of any property listed in either of the Registers in the project vicinity. Other potential historical resources may be present in the general project area. However, the project would be situated far enough away from any potential individual historical resource so as not to visually compete with the distinctive characteristics of these buildings.

The proposed demolition of the commercial fueling facility would contribute to the significant historical resource impact identified in the Eastern Neighborhoods EIR. However, the California Environmental Quality Act (CEQA) State Guidelines Section 15183 provides an exemption from environmental review for projects that are consistent with the development density established by existing zoning, community plan or general plan policies for which an Environmental Impact Report (EIR) was certified, except as might be necessary to examine whether there are project-specific effects which are peculiar to the project or its site. Since the existing building on the project site was determined ineligible for individual listing in either the National Register, the California Register, or local listing the proposed demolition of a contributor to a Central Waterfront Historic District would not result in any new significant or peculiar historical resource effects on the environment not previously identified in the Final EIR for the Eastern Neighborhoods Rezoning and Area Plans, nor would any environmental impacts be substantially greater than described in the Eastern Neighborhoods Final EIR.

Eastern Neighborhoods Final EIR Mitigation Measure K-1: Interim Procedures for Permit Review in the Eastern Neighborhoods Plan Area is not relevant to the project since the Central Waterfront Historical Resource Survey was completed prior to the adoption of the Eastern Neighborhoods Plan Area.

Mitigation Measures K-2 and K-3 are not relevant to the 720 & 740 Illinois St. and 2121 Third St. project since the project site is not located in either the South End Historic District (East SoMa) or Dogpatch Historic District (Central Waterfront).

In light of the above historical resources discussion, the proposed demolition of the commercial fueling facility would contribute to the significant historical resource impact identified in the Eastern Neighborhoods.
Transportation
The proposed project is not located within an airport land use plan area or in the vicinity of a private airstrip. Therefore, significance criterion 5c would not apply to the proposed project.

Trip Generation

Proposed Project Trip Generation: Trip generation of the proposed project was calculated using information in the 2002 Transportation Impacts Analysis Guidelines for Environmental Review (SF Guidelines) developed by the San Francisco Planning Department. The proposed project would generate about 898 person trips (inbound and outbound) on a weekday daily basis, consisting of 650 person trips by auto, 145 transit trips, 45 walk trips and 57 by other modes. During the p.m. peak hour, the proposed project would generate an estimated 105 vehicle trips (accounting for vehicle occupancy data for this Census Tract). Due to the project’s location near major transit routes, this is likely a conservative estimate of vehicle trips.

The estimated 105 new p.m. peak hour vehicle trips would travel through the intersections surrounding the project block. Intersection operating conditions are characterized by the concept of Level of Service (LOS), which ranges from A to F and provides a description of an intersection’s performance based on traffic volumes, intersection capacity, and vehicle delays. LOS A represents free flow conditions, with little or no delay, while LOS F represents congested conditions, with extremely long delays; LOS D (moderately high delays) is considered the lowest acceptable level in San Francisco. Given that the proposed project would add approximately 105 new p.m. peak hour vehicle trips to surrounding intersections, it is not anticipated to substantially increase traffic volumes at these or other nearby intersections, nor substantially increases average delay that would cause these intersections to deteriorate to unacceptable levels of service.

The Eastern Neighborhoods Final EIR evaluated three land use options. The proposed project is located in the Potrero Hill/Showplace Square Subarea of the Eastern Neighborhoods, which included the analysis (existing and 2025 operating conditions) of the above and other intersections in the area based on proposed development plan options of the Eastern Neighborhoods. The Third St./Mariposa St. intersection (one block away) would change from LOS B to LOS C under 2025 weekday p.m. peak hour conditions under all Plan options; the Third St./16th St. intersection (three blocks away) is anticipated to continue to operate at LOS D under 2025 weekday p.m. peak hour conditions under all Plan options; the Mariposa St./I-280 NB off-ramp intersection (four blocks away) is anticipated to change from LOS C to LOS D under all Plan options; and the Mariposa St./I-280 SB off-ramp intersection (four blocks away) would change from LOS F to LOS B under all Plan options.9

The nearest Potrero Hill/Showplace Square Plan Subarea intersection in which the Eastern Neighborhoods Final EIR identified a significant impact under 2025 weekday p.m. peak hour was at 25th St/Indiana St. intersection (approximately 13 blocks to the south of the project site) which operated at LOS B under existing (baseline) conditions and would deteriorate to LOS F under 2025 weekday p.m. peak hour conditions.

---

8 Brett Bollinger, San Francisco Planning Department, Transportation Calculations, June 16, 2010. These calculations are available for review as part of Case File No. 2010.0094E at the San Francisco Planning Department, 1650 Mission Street, Suite 400.
hour operating conditions under all Plan options. The other nearby Subarea intersection in which the Eastern Neighborhoods Final EIR identified a significant impact under 2025 weekday p.m. peak hour was at Potrero Ave./16th Street (approximately 15 blocks to the west of the project site) which operated at LOS B under existing (baseline) conditions and would deteriorate to LOS C under 2025 weekday p.m. peak hour operating conditions under all Plan options. It is likely these conditions would occur with or without the project, and the proposed project’s contribution of 105 p.m. peak hour vehicle trips would not be a substantial proportion of the overall traffic volume or the new vehicle trips generated by Eastern Neighborhoods’ projects, should they be approved. Under the Eastern Neighborhoods Final EIR, a specific mitigation measure to add a new traffic signal was identified for the 25th St./Indiana St. intersection. Under the Eastern Neighborhoods Final EIR, a specific mitigation measure was not proposed for the Potrero Ave./16th St. intersection and a Statement of Overriding Considerations related to the significant and unavoidable cumulative (2025) traffic impacts was adopted as part of the EIR Certification and project approval on January 19, 2009. As a result, the proposed project would have the potential to contribute to a significant impact to 2025 Cumulative conditions identified in the Eastern Neighborhoods EIR. However, the proposed project would not result in a project-specific traffic impact, therefore, requiring no further project specific analysis.

Transit
As indicated above, the proposed project is estimated to add 145 daily transit person trips, of which 15 are estimated to occur in the p.m. peak hour. The project site is served by several local and regional transit lines including Muni lines T-Third, 22-Filmore, and 48-Quintara, and therefore, the additional P.M. peak hour trips would likely be accommodated on existing routes, and would result in a less-than-significant effect to transit services.

The Eastern Neighborhoods Final EIR identified significant and unavoidable cumulative impacts relating to increases in transit ridership due to the change from 2025 No-Project operating conditions for Muni lines 9, 10, 12, 14, 14L, 22, 27, 47, 49 and 67 under all Eastern Neighborhoods rezoning options. Mitigation measures proposed to address these impacts related to pursuing enhanced transit funding; conducting transit corridor and service improvements; and increasing transit accessibility, service information and storage/maintenance capabilities for Muni lines in Eastern Neighborhoods. Even with mitigation, however, cumulative impacts on the above lines were found to be significant and unavoidable and a Statement of Overriding Considerations with findings was adopted as part of the Eastern Neighborhoods Rezoning and Area Plans approval on January 19, 2009. The proposed project would not conflict with the implementation of these mitigation measures, and it is likely the significant and unavoidable cumulative transit conditions would occur with or without the proposed project. The proposed project’s contribution of 25 p.m. peak hour transit trips would not be a substantial proportion of the overall transit volume generated by Eastern Neighborhood projects, should the project be approved. As a result, the proposed project would have the potential to contribute to a significant impact to 2025 Cumulative conditions identified in the Eastern Neighborhoods EIR. However, the proposed project would not result in a project-specific transit impact, therefore, requiring no further project specific analysis.
Parking
Under Planning Code Section 843.08, the proposed project would not be required to provide off-street parking spaces. Pursuant to Planning Code Sections 151.1, residential units are permitted up to 0.75 parking spaces per dwelling unit. Therefore, the proposed project includes 78 parking spaces in a basement floor garage. Based on the methodology presented in the 2002 Transportation Guidelines, on an average weekday, the demand for parking would be 133 spaces for the proposed project. Thus, the project would have an unmet parking demand of 55 spaces. The resulting parking deficit is considered to be a less-than-significant impact, regardless of the availability of on-street parking under existing conditions.

San Francisco does not consider parking supply as part of the permanent physical environment and therefore, does not consider changes in parking conditions to be environmental impacts as defined by CEQA. However, this report presents a parking analysis to inform the public and the decision makers as to the parking conditions that could occur as a result of implementing the proposed project.

Parking conditions are not static, as parking supply and demand varies from day to day, from day to night, from month to month, etc. Hence, the availability of parking spaces (or lack thereof) is not a permanent physical condition, but changes over time as people change their modes and patterns of travel.

Parking deficits are considered to be social effects, rather than impacts on the physical environment as defined by CEQA. Under CEQA, a project’s social impacts need not be treated as significant impacts on the environment. Environmental documents should, however, address the secondary physical impacts that could be triggered by a social impact. (CEQA Guidelines § 15131(a).) The social inconvenience of parking deficits, such as having to hunt for scarce parking spaces, is not an environmental impact, but there may be secondary physical environmental impacts, such as increased traffic congestion at intersections, air quality impacts, safety impacts, or noise impacts caused by congestion. In the experience of San Francisco transportation planners, however, the absence of a ready supply of parking spaces, combined with available alternatives to auto travel (e.g., transit service, taxis, bicycles or travel by foot) and a relatively dense pattern of urban development, induces many drivers to seek and find alternative parking facilities, shift to other modes of travel, or change their overall travel habits. Any such resulting shifts to transit service in particular, would be in keeping with the City’s “Transit First” policy.

The City’s Transit First Policy, established in the City’s Charter Section 16.102 provides that “parking policies for areas well served by public transit shall be designed to encourage travel by public transportation and alternative transportation.” The project area is well-served by local public transit (Muni lines T-Third, 22-Fillmore, and 48-Quintara) and bike lanes (40, 23, 7, and 5), which provide alternatives to auto travel.

The transportation analysis accounts for potential secondary effects, such as cars circling and looking for a parking space in areas of limited parking supply, by assuming that all drivers would attempt to find parking at or near the project site and then seek parking farther away if convenient parking is unavailable. Moreover, the secondary effects of drivers searching for parking is typically offset by a reduction in vehicle trips due to others who are aware of constrained parking conditions in a given area. Hence, any secondary environmental impacts which may result from a shortfall in parking in the vicinity of the proposed project would be minor, and the traffic assignments used in the transportation analysis,
as well as in the associated air quality, noise and pedestrian safety analyses, reasonably addresses potential secondary effects.

**Loading**

Based on the SF Guidelines, the proposed project would generate an average loading demand of 0.16 truck-trips per hour. Planning Code Section 152.1 does not require off-street loading for residential development less than 100,000 square feet. Therefore, off-street loading spaces are not required for the proposed project, which would include 95,461 square feet of residential uses (117,198 total gross sq.ft. – 21,737 gross sq.ft. accessory off-street parking = 95,461 sq.ft. gross residential). The proposed project would avoid the potential for impacts to adjacent roadways due to loading activities by limiting all long-term and construction loading/staging operations to the existing on-street parking area along Illinois Street or Third Street. Vehicles performing move in/move out activities would be able to obtain temporary parking permits for loading and unloading operations on Illinois Street and Third Street.

**Pedestrian and Bicycle Conditions**

The proposed project would generate approximately eight (8) p.m. peak-hour pedestrian trips. The proposed project would not cause a substantial amount of pedestrian and vehicle conflict, as there are adequate sidewalk and crosswalk widths. Pedestrian activity would increase as a result of the proposed project and future affordable housing project, but not to a degree that could not be accommodated on local sidewalks or would result in safety concerns.

There are no existing or proposed bike lanes on or adjacent to the project site, and no new curb cuts are proposed. In the vicinity of the project site, there are four major Citywide Bicycle Routes. Illinois Street, from 16th Street to Cesar Chavez includes the entirety of bicycle route #5, Indiana Street comprises a portion of bicycle route #7, Mariposa Street a portion of route #23, and 16th Street a portion of route #40. Although the proposed project and future affordable housing project would result in an increase in the number of vehicles in the project vicinity, this increase would not substantially affect bicycle travel in the area.

In summary, the project would not result in a significant effect with regard to transportation.

**Noise**

Ambient noise levels in the vicinity of the project site are typical of noise levels in neighborhoods in San Francisco, which are dominated by vehicular traffic, including trucks, cars, Muni vehicles, emergency vehicles, and land use activities, such as commercial businesses and periodic temporary construction-related noise from nearby development, or street maintenance. Noises generated by residential uses are common and generally accepted in urban areas. The noise generated by the occupants of the proposed project would not be considered a significant impact of the proposed project. An approximate doubling of traffic volumes in the area would be necessary to produce an increase in ambient noise levels noticeable to most people. The project would not cause a doubling in traffic volumes and therefore would not cause a noticeable increase in the ambient noise level in the project vicinity.

The *San Francisco General Plan* noise guidelines indicate that any new residential development in areas with noise levels above 60 dBA should be undertaken only after a detailed analysis of noise reduction requirements is made and needed noise insulation features are included in the design. In areas where
Exemption from Environmental Review

CASE NO. 2010.0094E

720 & 740 Illinois St and 2121 Third St

noise levels exceed 65 dBA, a detailed analysis of noise reduction requirements must be done and needed noise insulation features included in the design. According to the Eastern Neighborhoods Final EIR, noise levels on Illinois Street are between 65.1 and 70.0 dBA. Title 24 of the California Code of Regulations establishes uniform noise insulation standards for multi-unit residential projects (including hotels, motels, and live/work developments). This state regulation requires meeting an interior standard of 45 dBA in any habitable room. The Department of Building Inspections (DBI) would review the final building plans to ensure that the building wall and floor/ceiling assemblies for the residential development meet State standards regarding sound transmission for residents. Since the proposed project is subject to Title 24, **Mitigation Measure F-3: Interior Noise Levels from the Eastern Neighborhoods is not applicable.**

The Eastern Neighborhoods Final EIR identified a significant impact related to new development including noise-sensitive uses located along streets with noise levels above 60 dBA (Ldn), where such development is not already subject to the California Noise Insulation Standards in Title 24 of the California Code of Regulations. Since the proposed project is subject to Title 24, **Mitigation Measure F-3: Interior Noise Levels from the Eastern Neighborhoods Final EIR is not applicable.**

The Eastern Neighborhoods Final EIR identified a significant impact related to potential conflicts between existing noise-generating uses and new sensitive receptors, for new development including noise-sensitive uses. Since the proposed project includes noise-sensitive uses with sensitive receptors, **Mitigation Measure F-4: Siting of Noise-Sensitive Uses** applies to the proposed project. Pursuant to this measure, Charles M. Salter Associates Inc. were hired by the project sponsor to conduct a noise study that included a 24-hour noise measurement and site survey of noise-generating uses within two blocks of the project site.10 The 24-hour noise measurement for the 720 & 740 Illinois St. and 2121 Third St. project site was conducted on Thursday and Friday, April 1st and 2nd 2010.

The 24-hour noise measurement recorded a day-night noise average of 70 dBA (Ldn) on Illinois Street and 73 dBA (Ldn) on Third Street. These measurements are slightly higher than forecasted by noise modeling undertaken by the Department of Public Health, which predicts a traffic noise level of between 65.1 dBA and 70 dBA (Ldn) for the project block of Illinois and Third Streets (and surrounding blocks). The noise analysis site survey did not identify any land uses that generate unusual noise within two blocks of the project site.

Given the noise environment at the project site, the noise analysis concluded that it would appear that conventional residential construction, which would include double-paned windows (which typically offer 25 to 30 dBA noise reduction), would be sufficient to ensure an interior noise environment in habitable rooms of 45 dBA (Ldn) as required by the San Francisco Building Code. The noise analysis for the project site recommends that the project sponsor use windows with a minimum Sound Transmission Class (STC) rating of at least 35, which would ensure an interior noise environment of 45 dBA (Ldn) at the most exposed locations of the proposed residential building. The noise analysis has demonstrated that acceptable interior noise levels consistent with those in the Title 24 standards can be attained by the proposed project because double-paned windows would be included; therefore, no further acoustical analysis or engineering is required.

---

10 Ethan C. Salter, Charles M. Salter Associates Inc., 720-740 Illinois Street and 2121 Third Street- Environmental Noise Study, April 13th, 2010. This document is on file and is available for review as part of Case File No. 2010.0094E at the San Francisco Planning Department, 1650 Mission Street, Suite 450, San Francisco, CA.
The Eastern Neighborhoods Final EIR identified a significant impact related to potential conflicts between existing sensitive receptors and new noise-generating uses and determined that Mitigation Measures F-5: Siting of Noise-Generating Uses would reduce effects to a less-than-significant level. Since the proposed development does not propose residential uses that would be expected to generate noise levels in excess of ambient noise in the vicinity of the project site, Mitigation Measure F-5 is not applicable.

Construction noise is regulated by the San Francisco Noise Ordinance (Article 29 of the San Francisco Police Code). The Noise Ordinance requires that construction work be conducted in the following manner: 1) noise levels of construction equipment, other than impact tools, must not exceed 80 dBA at a distance of 100 feet from the source (the equipment generating the noise); 2) impact tools must have intake and exhaust mufflers that are approved by the Director of the Department of Public Works (DPW) to best accomplish maximum noise reduction; and 3) if the noise from the construction work would exceed the ambient noise levels at the site property line by 5 dBA, the work must not be conducted between 8:00 p.m. and 7:00 a.m., unless the Director of DPW authorizes a special permit for conducting the work during that period.

DBI is responsible for enforcing the Noise Ordinance for private construction projects during normal business hours (8:00 a.m. to 5:00 p.m.). The Police Department is responsible for enforcing the Noise Ordinance during all other hours. Nonetheless, during the construction period for the proposed project of approximately 14 months, occupants of the nearby properties could be disturbed by construction noise and possibly vibration. There may be times when noise could interfere with indoor activities in nearby residences and other businesses near the project site and may be considered an annoyance by occupants of nearby properties. The increase in noise in the project area during project construction would not be considered a significant impact of the proposed project because the construction noise would be temporary, intermittent, and restricted in occurrence and level, as the contractor would be obliged to comply with the City’s Noise Ordinance.

The Eastern Neighborhoods identified a significant impact related to construction noise that would include pile driving and determined that Mitigation Measure F-1: Construction Noise would reduce effects to a less-than-significant level. Since construction of the proposed project does not require pile driving, Mitigation Measure F-1 is not applicable to the proposed project.

Air Quality
Project-related demolition, excavation, grading and other construction activities may cause wind-blown dust that could contribute particulate matter into the local atmosphere. The Eastern Neighborhoods Final EIR identified a significant impact related to construction air quality and determined that Mitigation Measure G-1: Construction Air Quality would reduce effects to a less-than-significant level. Subsequently, the San Francisco Board of Supervisors approved a series of amendments to the San Francisco Building and Health Codes generally referred hereto as the Construction Dust Control Ordinance (Ordinance 176-08, effective July 30, 2008) with the intent of reducing the quantity of dust generated during site preparation, demolition, and construction work in order to protect the health of the general public and of onsite workers, minimize public nuisance complaints, and to avoid orders to stop work by the Department of Building Inspection (DBI). These regulations and procedures set forth by the San Francisco Building Code ensure that potential dust-related air quality impacts would be reduced less than
significant. Since the project is required to comply with the Construction Dust Control Ordinance, the project would not result in a significant impact related to construction air quality and Mitigation Measure G-1 is not applicable.

The Eastern Neighborhoods Final EIR identified a significant impact related to air quality for sensitive land uses and determined that Mitigation Measure G-2: Air Quality for Sensitive Land Uses would reduce effects to a less-than-significant level. In response to this concern, Article 38 of the San Francisco Health Code was amended to require that all newly constructed buildings containing ten or more units within the Potential Roadway Exposure Zone perform an Air Quality Assessment to determine whether the PM 2.5 concentration at the project site is greater than 0.2 micrograms per cubic meter (0.2 ug/m3). Sponsors of projects on sites where the PM 2.5 concentration exceeds the 0.2 ug/m3 threshold are required to install ventilation systems or otherwise redesign the project to reduce the PM 2.5 concentration for the habitable areas for the dwelling units to below the threshold. Since the 720 & 740 Illinois St. and 2121 Third St. project proposes to locate sensitive residential receptors within an area identified by the Department of Public Health (DPH) as potentially exceeding roadway particulate matter thresholds, an analysis of annual exposure to roadway related particulate matter was conducted. Results of the air quality modeling indicate that the maximum average annual exposure for sensitive receptors at the 720 & 740 Illinois St. and 2121 Third St. project site would be approximately 0.16 micrograms per cubic meter for PM 2.5 concentrations. This level is below the action threshold for mitigation recommended by DPH. Therefore, the project would have no significant air quality impacts on residents due to roadway emissions.

The Eastern Neighborhoods Final EIR identified a significant impact related to siting of uses that emit diesel particulate matter (DPM) and determined that Mitigation Measure G-3: Siting of Uses that Emit DPM would reduce these effects to a less-than-significant level. As stated in the Eastern Neighborhoods Final EIR, to minimize potential exposure of sensitive receptors to DPM, for new development including warehousing and distribution centers, commercial, industrial, or other uses that would be expected to be served by at least 100 trucks per day or 45 refrigerated trucks per day, the Planning Department shall require that such uses be located no less than 1,000 feet from residential units and other sensitive receptors. Since the proposed project would not be expected to be served by at least 100 trucks per day or 45 refrigerator trucks per day, the proposed project would not be expected to expose sensitive receptors to DPM and Mitigation Measure G-3 is not applicable.

The Eastern Neighborhoods Final EIR identified a significant impact related to siting of uses that emit toxic air contaminants (TACs) as part of everyday operations and determined that Mitigation Measure G-4: Siting of Uses that Emit Other TACs would reduce these effects to a less-than-significant level. Since the proposed project (construction of 104 residential units with 78 off-street parking spaces accessed from Illinois Street) residential vehicle trips would not contribute to the exceedance of TACs above the

---

11PM 2.5 is a measure of smaller particles in the air. PM 10 has been the pollutant particulate level standard against which EPA has been measuring Clean Air Act compliance. On the basis of newer scientific findings, the Agency is considering regulations that will make PM 2.5 the new "standard".

12See Board of Supervisors Ordinance No. 281-08, effective January 5, 2009.

13Department of Public Health, Michael J. Harris, MS., 720 & 740 Illinois Street and 2121 Third Street- Roadway Exposure Assessment, April 6th, 2010. This document is on file and is available for review as part of Case File No. 2010.0094E at the San Francisco Planning Department, 1650 Mission Street, Suite 450, San Francisco, CA.
threshold of “10,000 total vehicles per day” along Illinois Street, the 720 & 740 Illinois St. and 2121 Third St. project would not contribute to this significant impact and Mitigation Measure G-4 is not applicable.

**Greenhouse Gas Emissions**

Gases that trap heat in the atmosphere are referred to as greenhouse gases (GHGs) because they capture heat radiated from the sun as it is reflected back into the atmosphere, much like a greenhouse does. The accumulation of GHG's has been implicated as the driving force for global climate change. The primary GHGs are carbon dioxide, methane, nitrous oxide, ozone, and water vapor.

While the presence of the primary GHGs in the atmosphere are naturally occurring, carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O) are largely emitted from human activities, accelerating the rate at which these compounds occur within earth’s atmosphere. Emissions of carbon dioxide are largely by-products of fossil fuel combustion, whereas methane results from off-gassing associated with agricultural practices and landfills. Other GHGs include hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride, and are generated in certain industrial processes. Greenhouse gases are typically reported in “carbon dioxide-equivalent” measures (CO₂E).

There is international scientific consensus that human-caused increases in GHGs have and will continue to contribute to global warming. Potential global warming impacts in California may include, but are not limited to, loss in snow pack, sea level rise, more extreme heat days per year, more high ozone days, more large forest fires, and more drought years. Secondary effects are likely to include a global rise in sea level, impacts to agriculture, changes in disease vectors, and changes in habitat and biodiversity.

The Air Resources Board (ARB) estimated that in 2006 California produced about 484 million gross metric tons of CO₂E (MMTCO₂E), or about 535 million U.S. tons. The ARB found that transportation is the source of 38 percent of the State’s GHG emissions, followed by electricity generation (both in-state and out-of-state) at 22 percent and industrial sources at 20 percent. Commercial and residential fuel use (primarily for heating) accounted for 9 percent of GHG emissions. In the Bay Area, fossil fuel consumption in the transportation sector (on-road motor vehicles, off-highway mobile sources, and aircraft) and the industrial and commercial sectors are the two largest sources of GHG emissions, each accounting for approximately 36% of the Bay Area’s 95.8 MMTCO₂E emitted in 2007. Electricity generation accounts for approximately 16% of the Bay Area’s GHG emissions followed by residential fuel usage at 7%, off-road equipment at 3% and agriculture at 1%.

---

14 Because of the differential heat absorption potential of various GHGs, GHG emissions are frequently measured in “carbon dioxide-equivalents,” which present a weighted average based on each gas’s heat absorption (or “global warming”) potential.

19 Ibid.
REGULATORY SETTING
In 2006, the California legislature passed Assembly Bill No. 32 (California Health and Safety Code Division 25.5, Sections 38500, et seq., or AB 32), also known as the Global Warming Solutions Act. AB 32 requires ARB to design and implement emission limits, regulations, and other measures, such that feasible and cost-effective statewide GHG emissions are reduced to 1990 levels by 2020 (representing a 25 percent reduction in emissions).

Pursuant to AB 32, ARB adopted a Scoping Plan in December 2008, outlining measures to meet the 2020 GHG reduction limits. In order to meet these goals, California must reduce its GHG emissions by 30 percent below projected 2020 business as usual emissions levels, or about 15 percent from today’s levels.20 The Scoping Plan estimates a reduction of 174 million metric tons of CO2E (MMTCO2E) (about 191 million U.S. tons) from the transportation, energy, agriculture, forestry, and high global warming potential sectors, see Table 1, below. ARB has identified an implementation timeline for the GHG reduction strategies in the Scoping Plan.21 Some measures may require new legislation to implement, some will require subsidies, some have already been developed, and some will require additional effort to evaluate and quantify. Additionally, some emissions reductions strategies may require their own environmental review under CEQA or the National Environmental Policy Act (NEPA).

Exemption from Environmental Review

CASE NO. 2010.0094E
720 & 740 Illinois St and 2121 Third St

AB 32 also anticipates that local government actions will result in reduced GHG emissions. ARB has identified a GHG reduction target of 15 percent from current levels for local governments themselves and notes that successful implementation of the plan relies on local governments' land use planning and urban growth decisions because local governments have primary authority to plan, zone, approve, and permit land development to accommodate population growth and the changing needs of their jurisdictions.

The Scoping Plan relies on the requirements of Senate Bill 375 (SB 375) to implement the carbon emission reductions anticipated from land use decisions. SB 375 was enacted to align local land use and transportation planning to further achieve the State's GHG reduction goals. SB 375 requires regional transportation plans, developed by Metropolitan Planning Organizations (MPOs), to incorporate a "sustainable communities strategy" in their regional transportation plans (RTPs) that would achieve GHG emission reduction targets set by ARB. SB 375 also includes provisions for streamlined CEQA review for some infill projects such as transit-oriented development. SB 375 would be implemented over the next several years and the Metropolitan Transportation Commission's 2013 RTP would be its first plan subject to SB 375.

Senate Bill 97 (SB 97) required the Office of Planning and Research (OPR) to amend the state CEQA guidelines to address the feasible mitigation of GHG emissions or the effects of GHGs. In response, OPR amended the CEQA guidelines to provide guidance for analyzing GHG emissions. Among other changes to the CEQA Guidelines, the amendments add a new section to the CEQA Checklist (CEQA Guidelines Appendix G) to address questions regarding the project's potential to emit GHGs.

The Bay Area Air Quality Management District (BAAQMD) is the primary agency responsible for air quality regulation in the nine county San Francisco Bay Area Air Basin (SFBAAB). As part of their role in air quality regulation, BAAQMD has prepared the CEQA air quality guidelines to assist lead agencies in evaluating air quality impacts of projects and plans proposed in the SFBAAB. The guidelines provide procedures for evaluating potential air quality impacts during the environmental review process consistent with CEQA requirements. On June 2, 2010, the BAAQMD adopted new and revised CEQA air quality thresholds of significance and issued revised guidelines that supersede the 1999 air quality guidelines. The 2010 CEQA Air Quality Guidelines provide for the first time CEQA thresholds of significance for greenhouse gas emissions. OPR's amendments to the CEQA Guidelines as well as BAAQMD's 2010 CEQA Air Quality Guidelines and thresholds of significance have been incorporated into this analysis accordingly.

The most common GHGs resulting from human activity are CO2, CH4, and N2O.23 State law defines GHGs to also include hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. These latter GHG compounds are usually emitted in industrial processes, and therefore not applicable to the proposed project. Individual projects contribute to the cumulative effects of climate change by directly or indirectly emitting GHGs during construction and operational phases. Direct operational emissions include GHG emissions from new vehicle trips and area sources (natural gas combustion). Indirect emissions include emissions from electricity providers, energy required to pump, treat, and convey water, and emissions associated with landfill operations.

The proposed project would increase the activity by replacing a vacant lot with a mixed-use development which would result in additional vehicle trips and an increase in energy use. The development could also result in an increase in overall water usage which generates indirect emissions from the energy required to pump, treat and convey water. The development could also result in an increase in discarded landfill materials. Therefore, the proposed project would contribute to annual long-term increases in GHGs as a result of increased vehicle trips (mobile sources) and operations associated with energy use, water use and wastewater treatment, and solid waste disposal.

As discussed above, the BAAQMD has adopted CEQA thresholds of significance for projects that emit GHGs, one of which is a determination of whether the proposed project is consistent with a Qualified Greenhouse Gas Reduction Strategy, as defined in the 2010 CEQA Air Quality Guidelines. On August 12, 2010, the San Francisco Planning Department submitted a draft of the City and County of San Francisco's Strategies to Address Greenhouse Gas Emissions to the BAAQMD. This document presents a comprehensive assessment of policies, programs and ordinances that collectively represent San Francisco's Qualified Greenhouse Gas Reduction Strategy in compliance with the BAAQMD's 2010 CEQA Air Quality Guidelines and thresholds of significance.

San Francisco's GHG reduction strategy identifies a number of mandatory requirements and incentives that have measurably reduced greenhouse gas emissions including, but not limited to, increasing the energy efficiency of new and existing buildings, installation of solar panels on building roofs, implementation of a green building strategy, adoption of a zero waste strategy, a construction and demolition debris recovery ordinance, a solar energy generation subsidy, incorporation of alternative fuel vehicles in the City's transportation fleet (including buses and taxis), and a mandatory composting ordinance. The strategy also identifies 42 specific regulations for new development that would reduce a project's GHG emissions.

San Francisco's climate change goals as are identified in the 2008 Greenhouse Gas Reduction Ordinance as follows:

- By 2008, determine the City's 1990 GHG emissions, the baseline level with reference to which target reductions are set;
- Reduce GHG emissions by 25 percent below 1990 levels by 2017;
- Reduce GHG emissions by 40 percent below 1990 levels by 2025; and
- Reduce GHG emissions by 80 percent below 1990 levels by 2050.

The City's 2017 and 2025 GHG reduction goals are more aggressive than the State's GHG reduction goals as outlined in AB 32, and consistent with the State's long-term (2050) GHG reduction goals. San Francisco's Strategies to Address Greenhouse Gas Emissions identifies the City's actions to pursue cleaner energy, energy conservation, alternative transportation and solid waste policies, and concludes that San Francisco's policies have resulted in a reduction in greenhouse gas emissions below 1990 levels, meeting statewide AB 32 GHG reduction goals. As reported, San Francisco's 1990 GHG emissions were approximately 8.26 million metric tons (MMT) CO2E and 2005 GHG emissions are estimated at 7.82 MMTCO2E, representing an approximately 5.3 percent reduction in GHG emissions below 1990 levels.

The BAAQMD reviewed San Francisco’s Strategies to Address Greenhouse Gas Emissions and concluded that the strategy meets the criteria for a Qualified GHG Reduction Strategy as outlined in BAAQMD’s CEQA Guidelines (2010) and stated that San Francisco’s “aggressive GHG reduction targets and comprehensive strategies help the Bay Area move toward reaching the State’s AB 32 goals, and also serve as a model from which other communities can learn.”25

Based on the BAAQMD’s 2010 CEQA Air Quality Guidelines, projects that are consistent with San Francisco’s Strategies to Address Greenhouse Gas Emissions would result in a less than significant impact with respect to GHG emissions. Furthermore, because San Francisco’s strategy is consistent with AB 32 goals, projects that are consistent with San Francisco’s strategy would also not conflict with the State’s plan for reducing GHG emissions. As discussed in San Francisco’s Strategies to Address Greenhouse Gas Emissions, new development and renovations/alterations for private projects and municipal projects are required to comply with San Francisco’s ordinances that reduce greenhouse gas emissions. Applicable requirements are shown below in Table 2.

SAN FRANCISCO
PLANNING DEPARTMENT
Depending on a proposed project’s size, use, and location, a variety of controls are in place to ensure that a proposed project would not impair the State’s ability to meet statewide GHG reduction targets outlined in AB 32, nor impact the City’s ability to meet San Francisco’s local GHG reduction targets. Given that: (1) San Francisco has implemented regulations to reduce greenhouse gas emissions specific to new construction and renovations of private developments and municipal projects; (2) San Francisco’s sustainable policies have resulted in the measured success of reduced greenhouse gas emissions levels; (3) San Francisco has met and exceeded AB 32 greenhouse gas reduction goals for the year 2020; (4) current and probable future state and local greenhouse gas reduction measures will continue to reduce a project’s contribution to climate change; and (5) San Francisco’s Strategies to Address Greenhouse Gas Emissions meet BAAQMD’s requirements for a Qualified GHG Reduction Strategy, projects that are consistent with San Francisco’s regulations would not contribute significantly to global climate change. The proposed project would be required to comply with these requirements, and was determined to be consistent with San Francisco’s Strategies to Address Greenhouse Gas Emissions.  

In addition, the project site is located within the Potrero Hill/Showplace Square area plan analyzed under the Eastern Neighborhoods Rezoning EIR. The Eastern Neighborhoods Rezoning EIR assessed the GHG emissions that could result from rezoning of the Potrero Hill/Showplace Square area plan under the three rezoning options. The Eastern Neighborhoods Rezoning Options A, B and C are anticipated to result in GHG emissions on the order of 4.2, 4.3 and 4.5 metric tons of carbon dioxide equivalents (CO2E) per service population, respectively. The Eastern Neighborhoods EIR concluded that the resulting GHG emissions from the three options analyzed in the Eastern Neighborhoods Area Plans would be less than significant. The Eastern Neighborhoods EIR adequately addressed greenhouse gas emissions and the resulting emissions were determined to be less than significant. Therefore, the project would not result in any significant impacts related to GHG emissions.

As such, the proposed project would result in a less than significant impact with respect to GHG emissions.

**Shadow**

Planning Code Section 295 generally prohibits new buildings that would cast new shadow on open space that is under the jurisdiction of the San Francisco Recreation and Park Commission between one hour after sunrise and one hour before sunset, at any time of the year, unless that shadow would not result in a significant adverse effect on the use of the open space. To determine whether the proposed project would conform to Section 295, a shadow fan analysis was prepared by Planning Department staff. This analysis concluded that the proposed project would not have the potential to cast new shadow on any property.

---

27 Greenhouse gas emissions are typically measured in CO2E, or carbon dioxide equivalents. This common metric allows for the inclusion of the global warming potential of other greenhouse gases. Land use project’s, such as this, may also include emissions from methane (CH4) and nitrous oxide (N2O), therefore greenhouse gas emissions are typically reported at CO2E.

28 SP= Service Population. Service population is the equivalent of total number of residents + employees.

29 Greenhouse Gas Analyses for Community Plan Exemptions in Eastern Neighborhoods. April 20, 2010. Memorandum from Jessica Range, MEA to MEA staff. This memorandum provides an overview of the GHG analysis conducted for the Eastern Neighborhoods Rezoning EIR and provides an analysis of the emissions using a service population metric.
under the jurisdiction of the Recreation and Park Department. The proposed project would shade portions of nearby streets and sidewalks at times within the project block. These new shadows would not exceed levels commonly expected in urban areas, and would be considered a less-than-significant effect under CEQA.

In light of the above, the project would not result in a significant effect with regard to shadow, nor would the project contribute to any potential cumulative shading impacts.

**Hazardous Materials**

The project site currently consists of an existing commercial fueling facility. No underground storage tanks (UST) exist on the project site. A site mitigation plan (SMP) has been prepared and presents measures recommended in mitigating risks to the environment and risks to workers' and project site users' health and safety from the presence of metal and petroleum related contamination in the soil. The SMP has been prepared in accordance with the request of the San Francisco Department of Public Health, Environmental Health-Hazardous Waste Unit (EHS-HWU). John Carver Consulting (JCC) carried out a soil sampling and analytical program to characterize the site and to provide information for the preparation of the SMP.

A subsurface investigation was conducted at the project site to determine any potential health risks with development of the site for residential uses. The investigation found elevated levels of lead and petroleum hydrocarbons resulting from the historic fill placed at the project site and possible historic site activities (commercial fueling operations). There were no volatile organic compounds (VOCs), including Benzene in any of the soil samples tested.

Based on these results, EHS-HWU concluded:

1. The site is within the San Francisco Health Code, Article 22A (Maher Area). At any time 50 cubic yards or more of soil is disturbed on the site, the project proponent shall comply with Article 22A prior to applying or gaining a building permit from the City and County of San Francisco Department of Building Inspections.
2. Prior to business closure, San Francisco Petroleum Company shall comply with the San Francisco Health Code, Article 21 (Hazardous Materials) for closure.
3. Further discussion regarding the elevated TEPH and TPH-d in groundwater may be needed.

The SMP prepared by JCC and reviewed by EHS-HWU as received from the San Francisco Planning Department, anticipated the excavation of 600 tons of soil for the proposed project. Soils would be stockpiled and characterized for disposal. Dust control for excavation includes moisture conditioning the

30 San Francisco Planning Department, letter dated October 7, 2010 (Case No. 2010.0094K), Shadow Analysis for 2121 Third St/740 Illinois St. A copy of this document is available for public review at the Planning Department, 1650 Mission Street, Suite 400, San Francisco, California, as a part of Case File No. 2010.0094E.

31 John Carver Consulting, Site Mitigation Plan for Commercial Property 2121 3rd Street & 740 Illinois Street, San Francisco, CA, November 10, 2006. This document is available for review at the Planning Department, 1650 Mission Street, Suite 400, San Francisco, CA in File No. 2010.0094E.

32 San Francisco Department of Public Health, Commercial Property 2121 03rd Street and 740 Illinois Street San Francisco, California, EHS-HWU Case Number: 657. October 7, 2010. This document is available for review at the Planning Department, 1650 Mission Street, Suite 400, in File No. 2010.0094E.
soil, using dust suppressants and covering the exposed soil and stockpiles with secured plastic sheeting to prevent any generation of dust particles. Any soil removed from the site would be disposed at an appropriate licensed landfill. Excavated material that is loaded into trucks would be subject to all dust control measures. Loose soil from the truck body and tires would be removed prior to leaving the site. Any soil spilled during truck loading will be removed from all areas outside of the site. Upon completion of excavation, confirmation sampling and analysis would take place to determine if elevated levels of contaminants remain in the soil. Hot spots will be removed and disposed of if identified following review of confirmation sample analyses review. Should the project proponent decide to cap the site with the foundation to prevent human health exposure, a cap maintenance plan and a deed restriction would be required for the site.

The potential health risk to on-site construction workers and the public would be minimized by developing a health and safety plan (HSP). Prior to planned grading at the site and after a closure plan is prepared for the commercial fueling facility has been accepted, a HSP would be developed and forwarded to the EHS-HWU for review and comment. A construction health and safety (HSO) is required to be on site during excavation activities to ensure that all health and safety measures are maintained. The HSO would have authority to direct and stop all construction activities in order to ensure compliance with the HSP.

The Eastern Neighborhoods identified a significant impact related to Hazardous Building Materials and determined that Mitigation Measure L-1: Hazardous Building Materials would reduce effects to a less-than-significant level. Since there is an existing building at the project site, Mitigation Measure L-1 would apply to the project.

Implementation of Mitigation Measure L-1 would reduce effects related to hazardous building materials to a less-than-significant level.
Mitigation Measures

The project sponsor has agreed to implement the following mitigation measures.

Project Mitigation Measure 1 – Archeological Resources (Accidental Discovery)

The following mitigation measure is required to avoid any potential adverse effect from the proposed project on accidentally discovered buried or submerged historical resources as defined in CEQA Guidelines Section 15064.5(a)(c). The project sponsor shall distribute the Planning Department archeological resource “ALERT” sheet to the project prime contractor; to any project subcontractor (including demolition, excavation, grading, foundation, pile driving, etc. firms); or utilities firm involved in soils disturbing activities within the project site. Prior to any soils disturbing activities being undertaken each contractor is responsible for ensuring that the “ALERT” sheet is circulated to all field personnel including, machine operators, field crew, pile drivers, supervisory personnel, etc. The project sponsor shall provide the Environmental Review Officer (ERO) with a signed affidavit from the responsible parties (prime contractor, subcontractor(s), and utilities firm) to the ERO confirming that all field personnel have received copies of the Alert Sheet.

Should any indication of an archeological resource be encountered during any soils disturbing activity of the project, the project Head Foreman and/or project sponsor shall immediately notify the ERO and shall immediately suspend any soils disturbing activities in the vicinity of the discovery until the ERO has determined what additional measures should be undertaken.

If the ERO determines that an archeological resource may be present within the project site, the project sponsor shall retain the services of a qualified archeological consultant. The archeological consultant shall advise the ERO as to whether the discovery is an archeological resource, retains sufficient integrity, and is of potential scientific/historical/cultural significance. If an archeological resource is present, the archeological consultant shall identify and evaluate the archeological resource. The archeological consultant shall make a recommendation as to what action, if any, is warranted. Based on this information, the ERO may require, if warranted, specific additional measures to be implemented by the project sponsor.

Measures might include: preservation in situ of the archeological resource; an archeological monitoring program; or an archeological testing program. If an archeological monitoring program or archeological testing program is required, it shall be consistent with the Major Environmental Analysis (MEA) division guidelines for such programs. The ERO may also require that the project sponsor immediately implement a site security program if the archeological resource is at risk from vandalism, looting, or other damaging actions.

The project archeological consultant shall submit a Final Archeological Resources Report (FARR) to the ERO that evaluates the historical significance of any discovered archeological resource and describing the archeological and historical research methods employed in the archeological monitoring/data recovery program(s) undertaken. Information that may put at risk any archeological resource shall be provided in a separate removable insert within the final report.

Copies of the Draft FARR shall be sent to the ERO for review and approval. Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and the ERO shall receive a copy of the transmittal of the FARR to the NWIC. The Major Environmental Analysis division of the Planning Department shall
receive three copies of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, the ERO may require a different final report content, format, and distribution than that presented above.

**Project Mitigation Measure 2 - Noise (Mitigation Measure F-4: Siting of Noise-Sensitive Uses in the Eastern Neighborhoods Area Plans EIR)**

New development with noise-sensitive uses require the preparation of an analysis that includes, at a minimum, a site survey to identify potential noise-generating uses within two blocks of the project site, and including at least one 24-hour noise measurement (with maximum noise level readings taken at least every 15 minutes), prior to the first project approval action. The analysis shall demonstrate with reasonable certainty that Title 24 standards, where applicable, can be met, and that there are no particular circumstances about the proposed project site that appear to warrant heightened concern about noise levels in the vicinity.

The survey of the project vicinity did not identify any land uses that generate unusual noise within two blocks of the project site. Among the more prominent noise-generating uses in the vicinity are street traffic on Third and Illinois Streets, and the Muni T-Third Street rail line operations.

Given the noise environment at the project site, it would appear that conventional construction practices, which would likely include double-paned windows (which typically offer 25 to 30 dBA noise reduction), would be sufficient to ensure an interior noise environment in habitable rooms of 45 dBA, Ldn, as required by the San Francisco Building Code. Therefore, the noise study conducted at the project site has demonstrated that acceptable interior noise levels consistent with those in the Title 24 standards can be attained by the proposed project and no further acoustical analysis or engineering is required.

The City shall condition future development approvals to require that the subsequent project sponsors ensure that any equipment containing PCBs or DEPH, such as fluorescent light ballasts, are removed and properly disposed of according to applicable federal, state, and local laws prior to the start of renovation, and that any fluorescent light tubes, which could contain mercury, are similarly removed and properly disposed of. Any other hazardous materials identified, either before or during work, shall be abated according to applicable federal, state, and local laws.

**Public Notice and Comment**

A "Notification of Project Receiving Environmental Review" was mailed on July 2, 2010 to adjacent occupants and owners of properties within 300 feet of the project site regarding the previously proposed project that included construction of 62,516 square feet of residential uses with 70 residential units and 52 parking spaces on the lot facing Illinois Street and the remaining new lot facing Third Street was proposed to be dedicated to the City to comply with affordable housing requirements under Planning Code Section 419.5 Alternatives to the Inclusionary Housing Component. Seven members of the public expressed their concerns related to inclusionary housing, contaminated soils, crime, neighborhood character, and building massing.
Since issuance of the “Notification of Project Receiving Environmental Review” and as discussed in this Certificate of Determination, the project proposal has been revised to consist of demolition of an existing commercial fueling facility; merging two lots (006 & 021) into a single lot; and, construction of an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces. The concerns expressed by the public regarding the previously proposed project were also addressed in the Certificate of Determination above.

Conclusion
The Eastern Neighborhoods EIR incorporated and adequately addressed all potential impacts of the proposed 720 & 740 Illinois St. and 2121 Third St. project. As described above, the 720 & 740 Illinois St. and 2121 Third St. project would not have any additional or peculiar significant adverse effects not examined in the Eastern Neighborhoods EIR, nor has any new or additional information come to light that would alter the conclusions of the Eastern Neighborhoods EIR. Thus, the proposed 720 & 740 Illinois St. and 2121 Third St. project would not have any new significant or peculiar effects on the environment not previously identified in the Final EIR for the Eastern Neighborhoods Rezoning and Area Plans, nor would any environmental impacts be substantially greater than described in the Eastern Neighborhoods EIR. No mitigation measures previously found infeasible have been determined to be feasible, nor have any new mitigation measures or alternatives been identified but rejected by the project sponsor. Therefore, the proposed project is exempt from environmental review under Section 15183 and Section 21083.3 of the California Public Resources Code.
Community Plan Exemption Checklist

Date: January 24, 2010
Case No.: 2010.0094E
Project Title: 720 & 740 Illinois Street and 2121 Third Street
Zoning: Urban Mixed Use (UMU) District
68-X Height and Bulk District
Block/Lot: 4045/006 & 021
Lot Size: 22,241 square feet
Plan Area: Potrero Hill/Showplace Square Eastern Neighborhoods Subarea
Project Sponsor: David Sternberg, Sternberg Benjamin Architects, (415) 882-9783
Staff Contact: Brett Bollinger – (415) 575-9024
brett.bollinger@sfgov.org

A. PROJECT DESCRIPTION

The project site is a through lot located at on a block bounded by Third, Illinois, 18th, and 19th Streets in the Potrero Hill neighborhood. The proposed project would include demolition of an existing commercial fueling facility; merging two lots (006 & 021) into a single lot; and, construction of an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces.

The following analysis for the proposed 720 & 740 Illinois Street and 2121 Third Street project supersedes the previous determination issued on November 9, 2010 for a project that proposed to construct 62,516 square feet of residential uses that would include 70 residential units and 52 parking spaces on the lot facing Illinois Street and the remaining new lot facing Third Street was proposed to be dedicated to the City to comply with affordable housing requirements under Planning Code Section 419.5 Alternatives to the Inclusionary Housing Component.

B. EVALUATION OF ENVIRONMENTAL EFFECTS

The following checklist identifies the potential environmental impacts of the proposed project and indicates whether any such impacts are addressed in the applicable Programmatic EIR (PEIR) for the plan area.

This Community Plan Exemption Checklist examines the potential environmental impacts that would result from implementation of the proposed project and indicates whether any such impacts are addressed in the applicable Programmatic EIR (PEIR) for the plan area (i.e., the Eastern Neighborhoods Rezoning and Area Plans Final EIR).1 Items checked "Sig. Impact Identified in PEIR" identify topics for which a significant impact is identified in the PEIR. In such cases, the analysis considers whether the proposed project would result in impacts that would contribute to the impact identified in the PEIR. If the analysis concludes that the proposed project would contribute to a significant impact identified in the PEIR, the item is checked "Project

---

Contributes to Sig. Impact Identified in PEIR.” Mitigation measures identified in the PEIR applicable to the proposed project are identified in the text for each topic area.

Items checked "Project Has Sig. Peculiar Impact" identify topics for which the proposed project would result in a significant impact that is peculiar to the project, i.e., the impact is not identified as significant in the PEIR. Any impacts not identified in the PEIR will be addressed in a separate Focused Initial Study or EIR.

All items for which the PEIR identified as not a significant impact or the project would not have a significant peculiar impact are also checked "Addressed Below," and are discussed.

<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>
The Eastern Neighborhoods Final EIR evaluated three land use options “alternatives” and under each of these options, it was not anticipated that the proposed project would substantially damage scenic resources that contribute to a scenic public setting. As a proposed rezoning and planning process the project would not directly result in any physical damage. Rather, any changes in urban form and visual quality would be the secondary result of individual development projects that would occur subsequent to the adoption of changes in zoning and community plans.

With respect to views, the Eastern Neighborhoods Final EIR found that while development pursuant to the Plan would result in height increases and use district changes, the rezoning would not substantially degrade the views and new development up to the proposed height limits may even help define the street edge and better frame urban views. The Plan would not be considered to result in a significant adverse impact with regard to views. New construction in the Project area would generate additional night lighting but not in amounts unusual in residential and commercial zones and within developed urban areas in general. Thus, the Final EIR concluded that light and glare impacts would be less than significant.

The proposed project would replace an existing commercial fueling facility with an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces. While the new building would change the visual appearance of the site, it would not substantially degrade its visual character or quality. Furthermore, the proposed building would not be substantially taller than the existing development in the project vicinity and thus, would not obstruct longer-range views from various locations in the Plan Area and the City as a whole.

Design and aesthetics are by definition subjective, and open to interpretation by decision-makers and members of the public. A proposed project would, therefore, be considered to have a significant adverse effect on visual quality only if it would cause a substantial and demonstrable negative change. The proposed project would not have such change. As described above, the proposed building envelope meets Planning Code requirements for the Urban Mixed Use (UMU) zoning district.

The proposed project would be visible from some residential, commercial, and industrial buildings within the project site vicinity. Some reduced private views on private property would be an unavoidable consequence of the proposed project and would be an undesirable change for those individuals affected. Nonetheless, the change in views would not exceed that commonly expected in an urban setting, and the loss of those private views would not constitute a significant impact under CEQA.
One of the objectives of the Eastern Neighborhoods Rezoning and Area Plans Final EIR (FEIR) was to identify appropriate locations for housing in the City's industrially zoned land to meet a citywide need for more housing. According to the FEIR, the rezoning would not create a substantial demand for additional housing in San Francisco, or substantially reduce the housing supply. The proposed project would increase the population on site by constructing an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces. This increase in population would not be expected to have an adverse physical environmental impact.

The proposed project is not anticipated to create a substantial demand for increased housing because it does not proposed to provide retail space on the project site. Additionally, the proposed project would not displace substantial numbers of people because the project site is currently occupied by a commercial fueling facility. As such, construction of replacement housing would not be necessary.
Please see the Certificate of Determination for discussion of this topic.

### 7. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. **Would the project:**

<table>
<thead>
<tr>

</tr>
<tr>
<td>c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal, state, or regional ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?</td>
<td>✗</td>
<td>✗</td>
<td>✗</td>
<td>✗</td>
</tr>
<tr>
<td>d) Expose sensitive receptors to substantial pollutant concentrations?</td>
<td>✗</td>
<td>✗</td>
<td>✗</td>
<td>✗</td>
</tr>
</tbody>
</table>
Topics:

e) Create objectionable odors affecting a substantial number of people?

Please see the Certificate of Determination for discussion of this topic.

Topics:

8. GREENHOUSE GAS EMISSIONS—Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Although the PEIR did not identify a significant impact for this topic, please see the Certificate of Determination for the discussion.

Topics:

9. WIND AND SHADOW—Would the project:

a) Alter wind in a manner that substantially affects public areas?

b) Create new shadow in a manner that substantially affects outdoor recreation facilities or other public areas?

Wind

Based on consideration of the height and location of the proposed 65-foot-tall building, the proposed project does not have the potential to cause significant changes to the wind environment in pedestrian areas adjacent or near the project site. As a result, the proposed project would not have any significant wind impacts.

Shadow

Please see the Certificate of Determination for discussion of this topic.
10. RECREATION—Would the project:

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?

b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?

c) Physically degrade existing recreational resources?

The proposed project would provide on-site open space for passive recreational use for project residents through a combination of private decks and common roof decks. The project location is served by the following existing parks: Jackson Park, Potrero Hill Recreation Center, and McKinley Square. With the projected addition of 104 residential units, the proposed project would be expected to generate minimal additional demand for recreational facilities. The increase in demand would not be in excess of amounts expected and provided for in the area and the City as a whole. The additional use of the recreational facilities would be relatively minor compared with the existing use and therefore, the proposed project would not result in substantial physical deterioration of existing recreational resources. Thus, the proposed project would not result in significant impacts, either individually or cumulatively, in regard to recreation facilities, nor require the construction or expansion of public recreation facilities.

11. UTILITIES AND SERVICE SYSTEMS—Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

d) Have sufficient water supply available to serve the project from existing entitlements and resources, or require new or expanded water supply resources or entitlements?
The proposed project would not exceed wastewater treatment requirements of the Regional Water Quality Control Board and would not require the construction of new wastewater/storm water treatment facilities or expansion of existing ones. The proposed project would have sufficient water supply available from existing entitlement, and solid waste generated by project construction and operation would not result in the landfill exceeding its permitted capacity, and the project would not result in a significant solid waste generation impact. Utilities and service systems would not be adversely affected by the project, individually or cumulatively, and no significant impact would ensue.

The proposed project would not substantially increase demand for police or fire protection services and would not necessitate new school facilities in San Francisco. The proposed project would not result in a significant impact to public services.
13. BIOLOGICAL RESOURCES—
Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 454 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The project site is covered by a commercial fueling facility with impervious surfaces and is located in a developed urban area which does not support or provide habitat for any rare or endangered wildlife species, animal, or plant life or habitat, and would not interfere with any resident or migratory species. Accordingly, the proposed project would result in no impact on sensitive species, special status species, native or migratory fish species, or wildlife species. The project would not result in any significant effect with regard to biology, nor would the project contribute to any potential cumulative effects on biological resources.

14. GEOLOGY AND SOILS—
Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

---
Soil disturbing activities would be required for the foundation system for the proposed residential project. It is anticipated that the building would be constructed on a reinforced concrete mat foundation and would require excavation to a depth of approximately 5-7 feet below existing grade. The completed project would not substantially alter the overall topography of the site.

A geotechnical investigation has been performed for the proposed project. The project site is underlain by three feet of clayey sand with rock fragments, where the fill transitioned to more rock and gravel fragments with less clay and sand to a depth of eight feet where rocky fill was encountered.

The final building plans would be reviewed by the Department of Building Inspection (DBI). In reviewing building plans, the DBI refers to a variety of information sources to determine existing hazards and assess requirements for mitigation. Sources reviewed include maps of Special Geologic Study Areas and known landslide areas in San Francisco as well as the building inspectors’ working knowledge of areas of special geologic concern. Potential geologic hazards

---

2 Earth Mechanics Consulting, *Geotechnical Investigation for Planned Development at 2121 Third Street, San Francisco, California*, March 7, 2007. This report is available for review at the San Francisco Planning Department, 1650 Mission Street, Suite 400, in Project File No. 2010.0094E.
would be mitigated during the permit review process through these measures. To ensure compliance with all Building Code provisions regarding structure safety, when DBI reviews the geotechnical report and building plans for a proposed project, they will determine the adequacy of necessary engineering and design features. The above-referenced geotechnical investigation would be available for use by the DBI during its review of building permits for the site. Also, DBI could require that additional site-specific soils report(s) be prepared in conjunction with permit applications, as needed. Therefore, potential damage to structures from geologic hazards on the project site would be mitigated through the DBI requirement for a geotechnical report and review of the building permit application pursuant to DBI implementation of the Building Code.

The proposed project would not result in a significant effect related to geology, either individually or cumulatively.

<tr>
<td><strong>15. HYDROLOGY AND WATER QUALITY—</strong> Would the project:</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>a) Violate any water quality standards or waste discharge requirements?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion of siltation on- or off-site?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>f) Otherwise substantially degrade water quality?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other authoritative flood hazard delineation map?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>h) Place within a 100-year flood hazard area structures that would impede or redirect flood flows?</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The project site is completely covered by an existing commercial fueling facility and impervious services and would be completely covered by the proposed mixed-use building. The proposed project would not change the amount of impervious surface area on the site and runoff and drainage would not be adversely affected. Effects related to water resources would not be significant, either individually or cumulatively.

16. HAZARDS AND HAZARDOUS MATERIALS

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

</tbody>
</table>
h) Expose people or structures to a significant risk of loss, injury or death involving fires?

Please see the Certificate of Determination for discussion of this topic.

17. MINERAL AND ENERGY RESOURCES—
Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

c) Encourage activities which result in the use of large amounts of fuel, water, or energy, or use these in a wasteful manner?

The proposed project would not result in a significant physical environmental effect with respect to mineral and energy resources.

18. AGRICULTURE AND FOREST RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Would the project

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?
The project site does not contain agricultural uses and is not zoned for such uses. Therefore, the proposed project would not result in any significant impacts related to agricultural resources.

The proposed project would include demolition of an existing commercial fueling facility, lot merger, and construction of an approximately 65-foot tall, 117,198 square foot residential building containing 104 residential units, 78 off-street parking spaces, and 40 bicycle parking spaces.

As discussed in this document, the proposed project would not result in new, peculiar environmental effects, or effects of greater severity than were already and disclosed in the Eastern Neighborhoods Final EIR.
C. DETERMINATION

On the basis of this review, it can be determined that:

☒ The proposed project qualifies for consideration of a Community Plan exemption based on the applicable General Plan and zoning requirements; AND

☒ All potentially significant individual or cumulative impacts of the proposed project were identified in the applicable programmatic EIR (PEIR) for the Plan Area, and all applicable mitigation measures have been or incorporated into the proposed project or will be required in approval of the project.

☐ The proposed project may have a potentially significant impact not identified in the PEIR for the topic area(s) identified above, but that this impact can be reduced to a less-than-significant level in this case because revisions in the project have been made by or agreed to by the project proponent. A focused Initial Study and MITIGATED NEGATIVE DECLARATION is required, analyzing the effects that remain to be addressed.

☐ The proposed project may have a potentially significant impact not identified in the PEIR for the topic area(s) identified above. An ENVIRONMENTAL IMPACT REPORT is required, analyzing the effects that remain to be addressed.

Bill Wycko
