What is the Pipeline?

The San Francisco consolidated pipeline consists of development projects that would add residential units or commercial space, applications for which have been formally submitted to the Planning Department or the Department of Building Inspection (DBI). Pipeline projects encompass various stages of development: from applications filed to entitlements secured, building permits issued to projects under construction. The pipeline includes only those projects with a land use or building permit application. It does not include projects undergoing preliminary Planning Department project review or projections based on area plan analysis. When a project is issued a Certificate of Final Completion by DBI, it is taken out of the pipeline.

To filter inactive projects, the current pipeline only includes projects filed during the last five years, projects approved in the last four years (with the exception of large projects, which are kept for seven years), and projects for which construction has begun during the past three years.

Data sources for the pipeline are chiefly the project databases maintained by the Planning Department and the Department of Building Inspection, respectively, but data is also periodically obtained from the San Francisco Redevelopment Agency. Affordable housing projects sponsored by the Mayor's Office of Housing figure in the pipeline database only after an application has been filed with either the Planning Department or the Department of Building Inspection. Projects in the pre-development stages are not included in the *Pipeline Report*.

The *Pipeline Report* measures housing production in terms of housing units. Non-residential development, on the other hand, is measured in terms of building square footage. Depending on the proposed development project, square footage can be added with new construction or expansion, reduced with demolition or alteration, or re-allocated with conversion to other uses. Note that this report counts *net change*, or new space or units minus existing space lost through conversion or demolition.

Time Frame and Certainty of Development

As the pipeline spans the entire project development life cycle for small and large projects ranging from addition of an extra unit in the rear yard to multi-structure complexes of residential and commercial development needing environmental impact reports and transportation studies, it follows that the entitlement and ultimate actualization of some projects is several years and occasionally decades into the future, while some projects are abandoned altogether prior to receiving a permit or completion. The pipeline, then, represents a particular scenario that assumes that all proposed development projects are eventually entitled and all entitled development projects eventually built. In reality, this is not the case.

The Relevance of the Pipeline

The pipeline serves as a barometer of development trends in the medium to long term time horizon. It illustrates the location and scale of current and proposed future construction and reveals where new land uses are being established; it also records demolition and a partial listing of conversion of existing land uses. In sum, the pipeline provides a short- to medium-term picture of changing land uses, specifically tracking the changes to the city's housing stock and commercial uses. This report is meant to be a short overview.

Accuracy and Timeliness

The pipeline is compiled and consolidated from different data sources and is subject to errors due to varying accuracy and currency of original sources. The data in this report is pulled from original sources current through June 30, 2011. While we make an effort to consolidate multiple permits for different components of the same project from different agencies, it is not possible to validate the accuracy of all projects. Should you find inaccuracies and omissions, please e-mail your comments to aksel.olsen@sfgov.org.

Q2 2011 Pipeline at a Glance

- There are currently around 800 projects in the pipeline of varying sizes, complexities and stages.
- These projects, if completed, would add 45,800 net new housing units to the city's housing stock.
- Three large projects, Parkmerced, Treasure Island and Candlestick/Hunters Point Shipyard, would together add more than 25,000 units and several million square feet of commercial space over the next decades. These projects are now entitled by the City.
- The pipeline would also add a net of 16.3 million sq. ft. of non-residential uses. Within this total, office and retail space would see net gains of 11.3 million and 3.1 million sq. ft., respectively. There is an expected loss of 415,000 sq. ft. of light industrial or Production, Distribution and Repair (PDR) space because of conversion to commercial and residential space. Several hospital projects are also underway, including San Francisco General Hospital and California Pacific Medical Center.
- One in six projects (with approximately 1,200 units) are in the construction phase; other projects adding 2,200 units have received building permits approvals and an additional 16,700 units have received land use entitlements.

The Development Pipeline

There are currently just over 800 projects in the pipeline. Around 35 of these are projects sponsored through the San Francisco Redevelopment Agency. The Planning Department makes an effort to track these projects to make the pipeline more inclusive even as the Department is not always the entitling entity.

Of the pipeline projects, 77 percent are exclusively residential and 13 percent are mixed-use projects with both residential and commercial components. Only about one in 10 projects are non-residential developments without a residential component.

A net total of 45,800 new housing units would be added to the city's housing stock according to current data. This is still high relative to historical numbers and is largely due to the filing of applications during the past three years for new large scale, long term development programs for Parkmerced, Treasure Island and the Bayview Waterfront. The vast majority of pipeline projects, however, are small scale consisting of one to three units. The number of filings have been much lower since the economic slowdown began in earnest.

Pipeline projects could also bring a net addition of 16.1 million sq ft of commercial development.

Projects by Overall Status

Table 1 on the following page shows the following:

- Around 15 percent of all projects, representing 1,800 net added housing units and 800,000 sq ft of commercial space, are under construction.
- Around 26 percent of projects (with 3,000 net units and almost 900,000 sq. ft. commercial space) have received building permit approvals and may have already begun construction.
- Around one in three projects (including 3,600 net new units and an addition of 1.6 million sq ft of commercial space) have filed building permit applications with the Department of Building Inspections. Some of these may not yet be entitled by the Planning Department.

TABLE 1: Residential and Commercial Pipeline, by Pipeline Status and Land Use Category

Pipeline Status / Stage in the Development Process	Total No. of Projects	Net Housing Units	Net Comm'l Sq. Ft.	Net Commercial Gross Square Footage					
				CIE	Medical	Office	PDR	Retail	Visitor
Filed with Planning	108	7,620	4,894,000	1,031,000	0	2,765,000	-99,000	1,000,000	191,000
Approved by Planning	111	29,760	8,213,000	183,000	-33,000	5,664,000	-48,000	1,947,000	492,000
BP Filed	268	3,590	1,563,000	33,000	0	1,499,000	-106,000	73,000	63,000
BP Approved/ Issued/Re-Instated	200	2,980	858,000	68,000	0	748,000	-55,000	74,000	25,000
Construction	116	1,820	802,000	350,000	0	580,000	-106,000	44,000	-66,000
Grand Total	803	45,760	16,330,000	1,665,000	-33,000	11,255,000	-415,000	3,138,000	704,000

Notes:

/1/ Housing units in all tables rounded to nearest 10 units unless noted.

/2/ Commercial square feet in all tables rounded to nearest 1,000 square feet.

- Fourteen percent of the pipeline projects and 66 percent of the units have received Planning Department approvals. If and when constructed, these projects would add some 29,800 new units to the city's housing stock, and up to 8.2 million sq ft of commercial space. These projects now must secure building permits.
- Thirteen percent of projects, representing 7,600 units and 4.9 million commercial square feet are under Planning Department review.

Amount and Type of Net New Commercial Space

Projects in the current pipeline as noted also represent a potential net addition of 16.1 million sq ft of commercial development that would result in the following land use inventory changes:

- 11.3 million sq ft of office space
- 3.1 million sq ft of retail space
- 700,000 sq ft of visitor-serving uses, such as hotels or hostels.
- 1.7 million sq ft of cultural, institutional, educational (CIE) and medical space
- An overall loss of around 400,000 sq ft of space for production, distribution and repair (PDR).

- Office and retail uses remain the most common among the non-residential projects.

Location of New Development

Table 2 on the next page shows the three most active areas for residential development include Bayview/Hunter's Point/Candlestick (where the Bayview Waterfront Project is located), Treasure Island and Parkmerced. All these projects have now been entitled. Full realization of these three projects will be decades into the future. These three areas would account for around 25,800 net units or almost half of all net additional units in the pipeline. (See Map 1 for area boundaries used.)

Other areas with active residential development include Downtown, Market & Octavia, and Rincon Hill.

On the commercial side, more than 90 percent of the new space would be added in the Bayview/Candlestick, Downtown districts, Mission Bay, and Transbay areas. Of these, the bulk of this space would take place in Bayview and Downtown C-3 districts.

It is worth noting how geographically concentrated development is, for both residential and commercial uses. In both cases, the majority of potential development would happen in a handful of projects in a handful of districts.

TABLE 2: Residential and Commercial Pipeline, by Neighborhood

Neighborhood	Projects	Percent	Net Units	Percent	Avg Units / Project	Net Comm'l Sq. Ft.	Percent	Residential Rank	Commercial Rank

Pipeline Projects by Current Zoning Category

There is considerable variation on project sizes between--but also within--zoning district categories. Some zoning districts display similarly typed and sized projects, while others are host to a great variety of project sizes and types. First let us turn to the residential pipeline.

Residential Pipeline

Figure 1a shows the share of the total pipeline by zoning district type for number of projects, units and non-residential square feet, respectively. This chart indirectly measures project sizes. While most projects (around 57 percent as per the left-most column) fall in residential districts, these same *projects* account for just over 30 percent of *units*, (and less than 10 percent of the non-residential space). Figures 1b and 1c give more detail on the size distribution for residential and non-residential

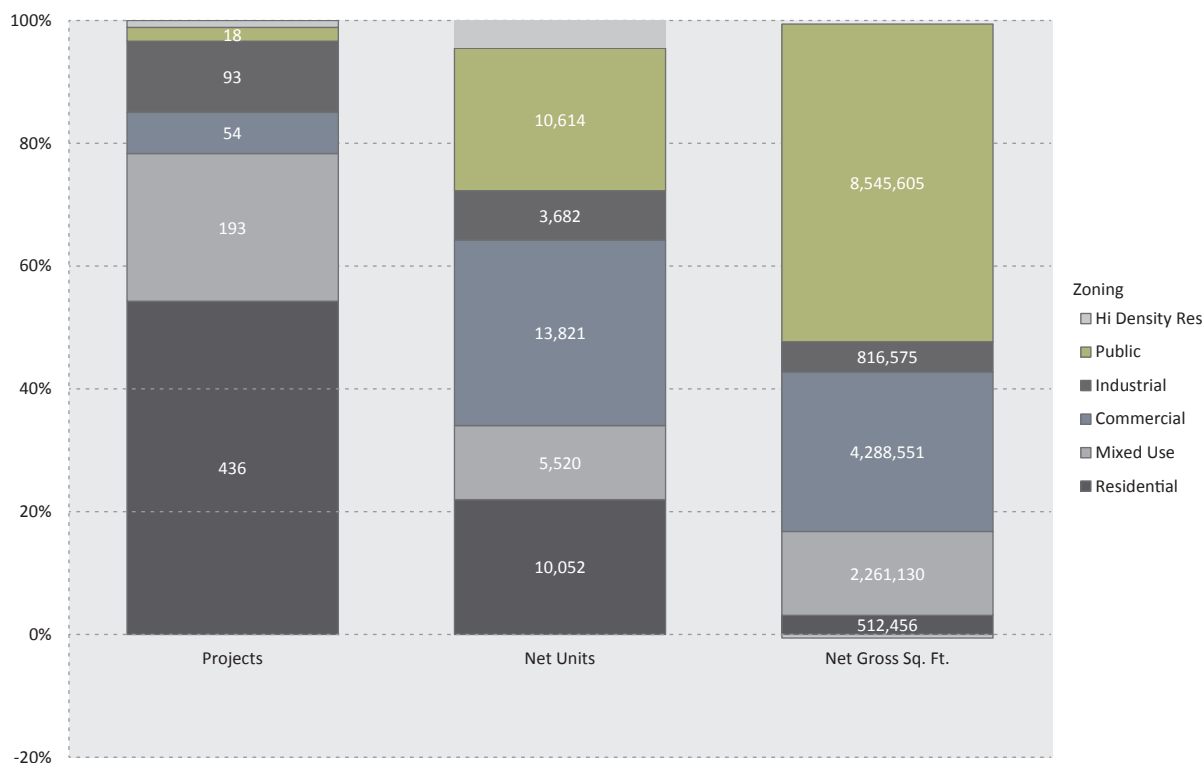

projects, respectively, using box plots. The median is the thick line in the center of each box and the size of the box denotes percentiles. The dots are outliers.

Per Figure 1b, the largest projects, as measured by the median, are found in High Density Residential and Commercial zone classes. While these projects tend to be much larger than those in other district categories, there is tremendous variation *within* these districts as well. Projects in residential districts, on the other hand, are far more homogenous, with the vast majority of projects counting fewer than 5 units. In the residential districts, there are a number of projects substantially larger than the rest, as seen from the outliers.¹

Figure 1c shows the size distribution for commercial projects, with lands zoned public accounting for the largest sizes, but note that this includes

¹ The outliers are here defined as points falling beyond the 1.5 * interquartile range.

FIGURE 1a: Pipeline Share of Total, by Zoning Category

only a handful of projects, as noted at the top of the chart.

Table 3 similarly shows the overall pipeline distribution by general zoning categories. The vast majority of the residential pipeline falls on four land zoning classes: Public, Residential, Mixed Use, and Commercial. Two large projects

are situated on parcels zoned “Public Land”: the Bayview Waterfront project, most of which is at Candlestick Point and the Treasure Island redevelopment project.² These projects could add more than 18,000 units.

² Technically, the Bayview Waterfront project spans multiple zoning districts, but has been accounted for here exclusively in the “Public” category where the majority of its units are located. Treasure Island has been rezoned as a part of the proceedings, but is here still counted under the Public heading.

Table 3: Residential and Commercial Pipeline by Generalized Zoning Category

District Type	Simplified Zoning	Projects	Net Units	Net Gross Sq. Ft.	Cult., Inst., Educ.	Medical	Office	Prod., Dist., Repair	Retail	Visitor
Commercial	C-2	19	3,710	506,000	0	0	136,000	-77,000	384,000	63,000

FIGURE 1b: Residential Pipeline Size Distribution, by Zoning Category

Includes projects where units > 0 and units < 1000, removing the largest outliers and non-residential projects

FIGURE 1c: Non-Residential Pipeline Size Distribution, by Zoning Category

Includes projects where commercial sq ft > 0 and commercial sq ft < 1,000,000 sq ft, removing the largest outliers and non-commercial projects

Residential projects on *residentially* zoned lots, representing the largest number of projects, account for 10,900 units, or the second largest class. Two thirds of these units, however, are in the Parkmerced redesign project and a couple of large San Francisco Housing Authority projects (one in the Potrero Hill area, the other on Sunnydale Ave as part of the Hope SF program). The remainder of projects on residentially zoned parcels are relatively small with about a quarter of projects being single family housing projects. Small scale projects of one to nine units account for more than 90 percent of the residential projects. Only a handful are larger and thus account for the majority of units.

The mixed use districts, a diverse group ranging from neighborhood commercial districts around the city to Eastern Neighborhoods districts, account for 8,100 units in 248 projects.

Residential projects on *commercially* zoned lots make up the fourth largest group of 6,000 new units in more than 50 projects.

Another 700 units are pending on industrially zoned lands. About a third of these projects are mixed use projects with a commercial component. The added residential units in industrial areas are accompanied by loss of PDR space and addition of retail space (see Table 3).

Also of note, the high-density, transit-accessible downtown neighborhoods of Rincon Hill and Transbay which account for a fraction of one percent of the city's land area, nonetheless account for more than four percent of all units in the pipeline in a handful of projects. These projects are thus large, averaging more than 250 net units per project.

In contrast, residential projects in the low-density residential (RH) districts are by per zoning requirements relatively small scaled, in-fill developments, accounting for some 44 percent of proposed projects but just 2 percent of the total units (or 1,000 net units) in the pipeline. Projects on RM-zoned lots, in turn, account for 8 percent of projects and 21 percent of units, again largely because of a large project, the Parkmerced Redesign project. In terms of land area, residential

zoning districts form the largest group, comprising 46 percent of the city land area.

Commercial Pipeline

Non-residential development is predominantly allowed in commercial and mixed use districts³; thus the majority of commercial space are proposed to be added in these land classes.

The commercial pipeline in general is characterized by 81 projects, but also 100 mixed use projects which contain both residential and non-residential components. The commercial component in the 221 mixed use district projects are, in general also small, with half of projects being smaller than 5,000 gross square feet, respectively. (Some of these projects in mixed use districts are exclusively residential.)

The largest concentration of potential commercial development is in a small number of projects in areas currently zoned public⁴. Development here would add some net 8.9 million square feet, or more than half of all proposed commercial development, in just 11 projects. The largest of these proposed developments is the Bayview Waterfront Project which would add more than six million commercial square feet as currently proposed; however, there were several variants with less development analyzed as a part of the environmental review.

Commercial districts account for the second largest concentration of non-residential development, with 26 percent of the total in 55 projects. The mixed use districts account for a larger *number* of projects (even if this count may include projects that are exclusively residential) totalling 1.8 million square feet. The remaining districts account for only a minor portion of non-residential development.

High density residential and industrial districts will see some loss of commercial square footage as some of these spaces are converted to residential uses.

³ Some institutional uses are allowed in residential districts, such as day care and residential care. Further, P-zoned properties are occasionally developed.

⁴ See footnote 2.

FIGURE 2: Residential Pipeline, by Status & Building Size

FIGURE 3: Non-Residential Pipeline, by Status & Building Size

Residential Pipeline by Project Size

Table 4 shows the residential pipeline by neighborhood and the number of units in the project.⁵

⁵ In most cases this measures the number of units in the building. However, a handful of projects include more than one building thus making this accounting an approximation.

Different areas exhibit different project size distributions. Thus we see that, for instance, Downtown will get the bulk of its units in large projects (50-99 units, 100-249 units, above 249 units). This is also the case for areas like Market Octavia, Showplace Square, and in particular Transbay and Rincon Hill. Conversely, for Inner

TABLE 4: Projects by Neighborhood and Building Size

Notes:

/1/ Housing unit counts are not rounded.

/2/ As the table categorizes by building size, numbers here represent total units as opposed to net units (subtracting replaced units), for which reason the unit count is higher than in other summary tables.

Sunset, the largest addition come in projects of two to nine units and single family projects. For the city as a whole, three out of every four units could come in a relative small number of projects or development programs containing more than 250 units, while the overwhelming majority of areas have a size distribution that is leaning more on the smaller end of the spectrum, suggesting the relative geographic concentration of proposed development.

Small scale, in-fill projects make up the bulk of pipeline projects, but account for a minority of units: More than two thirds of the residential projects would entail buildings with 10 units or less, while half the projects include three units or less. Summing the bottom half of all pipeline projects would contribute 2,900 units, or six percent of the total number of pipeline units. Areas where these small projects are typical include areas like Richmond, Ingleside, Inner Sunset, and Central

Except for Parkmerced, development in residentially zoned areas in the western part of the city is limited in scope and consists chiefly of small-scale in-fill projects. The majority of units, and the vast majority of projects are in buildings of 1 or 2 to 9 units.

Figure 2 shows the residential pipeline by building size and pipeline status. The residential pipeline shows that:

- Of the 2,900 units with building permits approved, 1,600 units are in buildings of 100 units and above.

- Only three percent of the residential pipeline will be in buildings with nine units or less across all entitlement stages.
- Single family homes constitute a fraction of one percent of the total units in the pipeline.

Project Size by Proposed Use

Nearly three quarters of all projects are residential. Another 18 percent are mixed use projects with residential and non-residential components. The remaining 10 percent or so of the projects are distributed among the commercial categories, with office, institutional and retail being the most frequent. There are also a few PDR and hotel projects.

The office projects are the largest in the pipeline, with a median size of 200,000 square feet. No other use type comes close to that, with the nearest follow-up being visitor-related uses, with a median size of 47,800 square feet.

Mixed projects, which contain more than one non-residential use, but where there is not a predominant use among them, are relatively rare. Two of these include California Pacific Medical Center projects currently under review. They are categorized under “Mixed” because they contain both institutional and office uses.

The Mixres category, which refers to projects with both residential and non-residential components,

TABLE 5: Pipeline Project Size, by Proposed Land Use

Proposed Use	Projects	Percent	Mean	Standard Deviation	Percentile				
					0	25	50 (Median)	75	100
CIE	20	3%	82,540	139,961	2,420	8,778	21,433	67,422	548,776

Visitor	4	1%	53,731	17,296	40,370	44,593	47,750	56,889	79,054
Total	798	100%	107,525	877,474	1,000	2,400	3,600	26,376	18,720,000

includes the Bayview Waterfront project, helping explain both the high average size in the group as well as the 100th percentile at 18.7 million square feet. However, the group also includes a number of small and mid-sized projects with residential uses and ground floor retail. The median project size, at 26,000 square feet, gives a sense of the size.

Residential use-projects are the most numerous category, with 7 out of ten projects falling under this heading. They are fairly small, commonly two units as evidenced by the median. Seventy-five percent of projects are three units or less.⁶

Conversion of Commercial Space to Residential Use⁷

There are 50 projects in the current pipeline database proposing demolition or conversion

⁶ The data on size of each unit is spotty, so the square footage numbers reported for residential projects is based on a unit size assumption of 1,200 square feet per unit.

⁷ Numbers represented here differ from those reported in Table 1. Table 1 represents the net change of all projects whereas numbers here are limited to the specific projects representing conversions or demolitions

of existing production, distribution and repair-use (PDR) buildings to residential use.⁸ The corresponding figure for the conversion of office space is 35 projects. These projects represent approximately seven percent (or 3,200 units) and five percent (or 2,400 units), respectively, of the residential units in the pipeline.

Conversion of PDR Space

Table 6 provides a measure of how many units are produced relative to the lost PDR space.

- If the pipeline were developed as proposed, about 821,000 sq ft of PDR space would be lost to conversion or demolition.⁹ It would be

resulting in a net loss of PDR space (Table 6) and office space (Table 7).

⁸ This pipeline only accounts for PDR built space. Hence, the conversion of undeveloped or vacant lands currently in PDR uses, such as construction or open storage yards are not accounted for in this report.

⁹ Table 6 shows only projects that include the conversion or loss of PDR space to residential use. Other, separate projects proposing to add PDR space not involving conversion or demolition of PDR space are not counted in this table. Table 1 shows a net loss of 375,000 sq ft as it is a net tally of all projects that add, convert or demolish PDR space while this table only counts loss.

TABLE 6: PDR Space Conversion to Residential Use, by Planning District

Neighborhood	Projects	Percent	Net Units	Percent	PDR Net	Percent	Avg Units / Project	Avg PDR Loss / Project

replaced with residential units (3,200) and/or other commercial uses.

- Most of the PDR to residential conversions are found in Bayview Hunters Point, Central Waterfront, East SoMa and Mission districts, accounting together for more than two thirds of the overall loss. The loss of PDR space in these neighborhoods would in turn bring in 1,600 net new housing units.

Conversion of Office Space

- Approximately 600,000 sq ft of office space is proposed to be converted to residential and/or other commercial use. This loss of office space is mainly taking place in the northeastern part of the city where most office space is located. Table 7 shows that the Downtown and Transbay districts would lose the most office space – around 400,000 square feet, or five out of eight converted square feet.
- A total of 2,400 units are proposed to be built replacing the lost office space.

Nearly all units replacing office uses are in mid- to high-rise residential structures of 20 to 500 housing units in high density zoning districts. These projects are mostly concentrated in the eastern

half of the city: Rincon Hill, East SoMa, Showplace Square & Potrero Hill, Transbay, Mission and Downtown.

These conversions of a number of *individual* office buildings reported here notwithstanding, taken together with other commercial developments in the pipeline as shown in Table 1, the overall result would still be a net addition of office space. As reported in Table 1, the net addition of office amounts to 11 million sq. ft. citywide.

Projects Under Planning Review

Project Application Filings

Table 8 below shows that a total of 20 planning applications¹⁰ were filed in the second quarter of 2011, down from 20 projects in the previous quarter. Corresponding to these 20 projects are 130 residential units and practically no new commercial development. The quarter's filings are now below the six quarter moving average, perhaps suggesting a slight slowdown in applications overall. Taken as a whole since 2001 (Figures 4 and 5), numbers are still way below the mid-decade boom years, and will probably remain so in the foreseeable future. Still, the average size of projects has ticked up a bit since recent decade lows. There are, however as seen in this report, still a large reservoir of projects in the pipeline from before the recession. As the completion of many of the larger projects are many years in the future, they may be less prone to short term economic stresses. Still, some sponsors will undoubtedly find it much harder to secure financing for their projects, the relative strength of the San Francisco market in this downturn notwithstanding.

Projects approved during any given quarter shows a time lag relative to the projects filed curve. A project is often approved in another quarter than the one in which it was filed, particularly for projects needing environmental review and/or conditional use authorization, while others are abandoned altogether before approval.

A few of the projects filed during the second quarter of 2011 include:

- On 185 Channel Street, a new 8 story, 315 units residential structure with ground floor retail was proposed.
- At 140 Ninth Street, the project would change occupancy from retail furniture store to mixed use (art studio, art gallery, congregate living

facility and efficiency apartments, adding 10 units.

Other Project Activity

- A draft environmental impact report was completed for the Americas Cup project in July, with public hearings following in the late summer and early fall.
- The Treasure Island project was as noted earlier fully approved during the quarter, meaning that the three largest residential projects in the pipeline are now entitled.

¹⁰ For the purposes of this table, we only count projects where housing units or space would be added, and thus ignore administrative filings. Note that the filings may represent different versions of the same project should a later entitlement be applied for the same property, and that numbers may thus include a measure of overlap....

MAP 4: Generalized Zoning Districts

Data Dictionary

PROJECT LOCATION	
Block Lot	Concatenated 4-digit assessor block + 3-digit assessor's lot Numbers
Address	Name and address of project.
Planning Neighborhood	Areas related to current planning efforts and roughly to city neighborhoods.
PROJECT STATUS	
Under Construction	Project is under construction.
BP Approved	DBI approved building permit.
BP Issued	Project sponsor has picked up approved building permit (proxy measure of under construction)
BP Reinstated	DBI reinstates a lapsed building permit (lapses after 1 year with no activity).
BP Filed	Application for building permit filed with DBI.
PL Approved	All Planning actions approved.
PL Filed	Project application filed with the Planning Department
Bestdate	The date of the most recent action leading to the BESTSTAT value, i.e., a project's current pipeline status (e.g., date building permit application is filed if BESTSTAT = BP Filed).
DEVELOPMENT PROFILE	
Units	Net total dwelling units.
Net Comm'l Sq. Ft	Nonresidential gross square feet (GSF). Best interpreted as net new useable GSF with demolition of existing space subtracted (not total project gsf).
CIE	CIE or Cultural, Institutional, Educational includes educational services, social services, museums, zoos, and membership organizations.
MED	Medical includes health services offices and hospitals and laboratories throughout the City.
MIPS	MIPS is largely any activity where information is the chief commodity that is processed (managerial, information, professional, business services, multi-media).
PDR	PDR or Production, Distribution and Repair includes automobile and other repair services throughout the City, plus construction, transportation, communications, utilities, agriculture mining, manufacturing, wholesale trade, and motion picture production distribution, and services located outside of the downtown, transbay, and Northeast Districts. Does not include undeveloped or vacant land area used for PDR activities such as construction yards or open storage areas.
RETAIL/ENT	Retail Includes retail trade, amusement and recreation services, and personal services located throughout the City.
VISITOR	Visitor (or Hotel) includes hotels and other lodging located throughout the City.
Land Use	This field summarizes in one word what type of project is being proposed. Apart from the commercial categories listed, this field includes <ul style="list-style-type: none"> - Mixres (when both commercial and residential uses are proposed) - Mixed (when no residential use present and when multiple commercial uses are proposed and not one is dominating (>80% of commercial square feet)) - Resident is used to denote any residential project where there is no commercial component.

Quarter 2, 2011

Subset of pipeline where project adds either more than 10 units or 10,000 GSF
