What is the Pipeline?

The San Francisco consolidated pipeline consists of development projects that would add residential units or commercial space, applications for which have been formally submitted to the Planning Department or the Department of Building Inspection (DBI). Pipeline projects encompass various stages of development: from applications filed to entitlements secured, building permits issued to projects under construction. The pipeline includes only those projects with a land use or building permit application. It does not include projects undergoing preliminary Planning Department project review or projections based on area plan analysis. When a project is issued a Certificate of Final Completion by DBI, it is taken out of the pipeline.

To filter inactive projects, the current pipeline only includes projects filed during the last five years, projects approved in the last four years (with the exception of large projects, which are kept for seven years), and projects for which construction has begun during the past three years.

Data sources for the pipeline are chiefly the project databases maintained by the Planning Department and the Department of Building Inspection, respectively, but data is also periodically obtained from the (now Successor Agency to the) San Francisco Redevelopment Agency. Affordable housing projects sponsored by the Mayor's Office of Housing figure in the pipeline database only after an application has been filed with either the Planning Department or the Department of Building Inspection. Projects in the pre-development stages are not included in the *Pipeline Report*.

The *Pipeline Report* measures housing production in terms of housing units. Non-residential development, on the other hand, is measured in terms of building square footage. Depending on the proposed development project, square footage can be added with new construction or expansion, reduced with demolition or alteration, or re-allocated with conversion to other uses. This report counts *net change*, or new space or units minus existing space lost through conversion or demolition.

Time Frame and Certainty of Development

As the pipeline spans the entire project development life cycle for small and large projects ranging from addition of an extra unit in the rear yard to multi-structure complexes of residential and commercial development needing environmental impact reports and transportation studies, it follows that the entitlement and ultimate actualization of some projects is several years and occasionally decades into the future, while some projects are abandoned altogether prior to receiving a permit or completion. The pipeline, then, represents a particular scenario that assumes that all proposed development projects are eventually entitled and all entitled development projects eventually built. In reality, this is not the case.

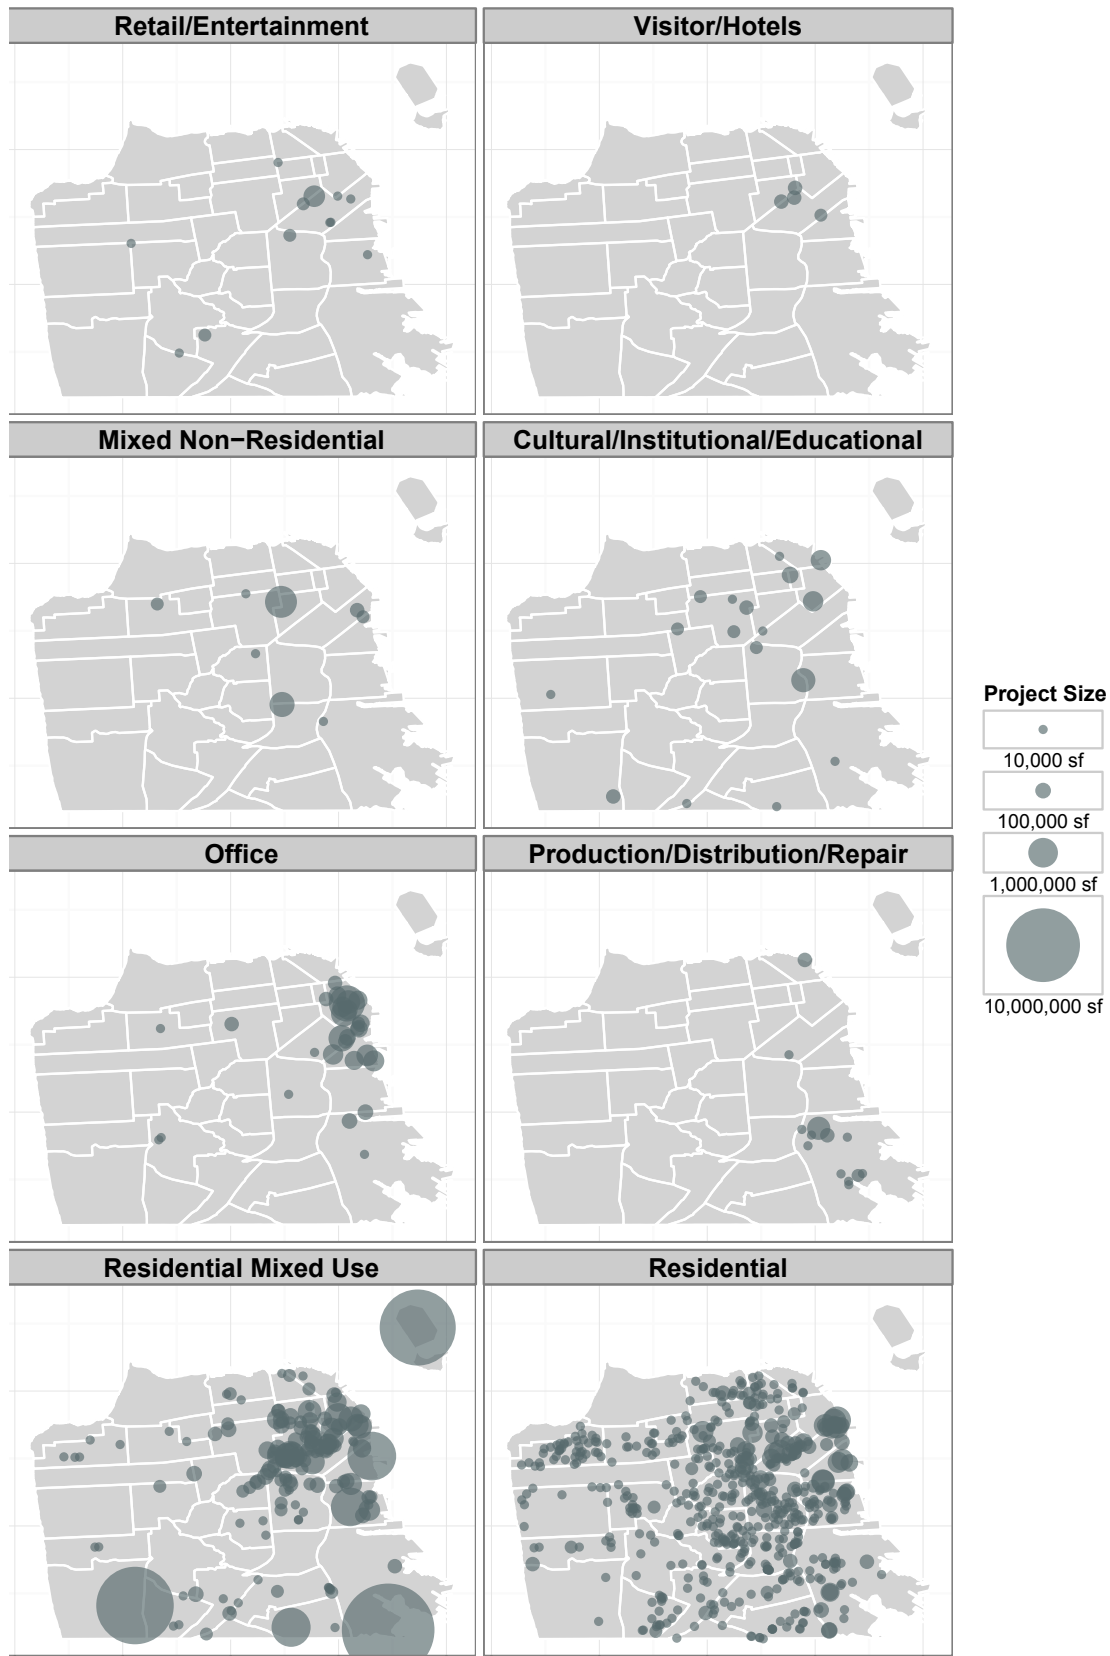

The Relevance of the Pipeline

The pipeline serves as a barometer of development trends in the medium to long term time horizon. It illustrates the location and scale of current and proposed future construction and reveals where new land uses are being established; it also records demolition and a partial listing of conversion of existing land uses. In sum, the pipeline provides a short- to medium-term picture of changing land uses, specifically tracking the changes to the city's housing stock and commercial uses. This report is meant to be a short overview.

Accuracy and Timeliness

The pipeline is compiled and consolidated from different data sources and is subject to errors due to varying accuracy and currency of original sources. The data in this report is pulled from original sources current through June 30, 2013. While we make an effort to consolidate multiple permits for different components of the same project from different agencies, it is not possible to validate the accuracy of all projects. Should you find inaccuracies and omissions, please e-mail your comments to aksel.olsen@sfgov.org.

Map 1. General Overview of Magnitude and Location of Development, by Major Land Use Type

The Development Pipeline

There are currently just above 800 projects in the pipeline. Of these, 69 percent are exclusively residential and 20 percent are mixed-use projects with both residential and commercial components. Only about one in 10 projects are non-residential developments without a residential component. Map 1 (left) gives the general location and magnitude of this development across is many stages.

A net total of 48,200 new housing units would be added to the city's housing stock according to current data. This is high relative to historical numbers and is largely due to the filing and entitlement of applications during the past three years for new large scale, long term development programs for Parkmerced, Treasure Island and the Bayview Waterfront. These projects, as well as their expected development over the course of decades must be kept in mind when considering the overall totals. The vast majority of pipeline projects, however, are small scale consisting of one to three units. The number of filings for new projects slowed down during the Great Recession of 2007-2009 and beyond, but has started to revover in earnest as evidenced by both new project applications as well as the construction of projects with dated entitlements. The "hot spot" for much of this development is in the Mid Market area.

Projects by Overall Status

Table 1 shows the following:

- Around 18 percent of all projects, representing 4,600 net added housing units and 620,000 sq ft of commercial space, are under construction.
- Around 24 percent of projects (with 4,000 net units and 2,010,000 sq. ft. commercial space) have received building permit approvals. As of the time of writing, some may have moved to the construction phase.
- Around one in three projects (including 3,400 net new units and an addition of 3.8 million sq ft of commercial space) have filed building permit applications with the Department of Building Inspections. These projects have predominantly received entitlements by the Planning Department.
- Fourteen percent of the pipeline projects and 64 percent of the units have received Planning Department approvals. If and when constructed, these projects would add some 29,100 new units to the city's housing stock, and up to 5.6 million sq ft of commercial space. These projects now must secure building permits.
- Thirteen percent of projects, representing 7,100 units and 3.7 million commercial square feet are under initial Planning Department review.

Table 1. Residential and Commercial Pipeline, by Pipeline Status and Land Use Category

| Pipeline Status / Stage in the Development Process | Total No. of Projects | Net Housing Units | Net Comm'l Sq. Ft. | Net Commercial Gross Square Footage | | | | | |
|--|-----------------------|-------------------|--------------------|-------------------------------------|---------|------------|----------|-----------|----------|

Amount and Type of Net New Commercial Space

Projects in the current pipeline as noted also represent a potential net addition of 15.7 million sq ft of commercial development that would result in the following land use inventory *changes*:

- 10.9 million sq ft of office space
- 2.7 million sq ft of retail space
- 20,000 sq ft of visitor-serving uses, such as hotels or hostels.
- 1.7 million sq ft of cultural, institutional, educational (CIE) and medical space
- An overall loss of around 200,000 sq ft of space for production, distribution and repair (PDR).

Location of New Development

Table 2 shows the three most active areas for residential development include Bayview/Hunter's Point/Candlestick (where the Bayview Waterfront Project is located), Treasure Island and Parkmerced. All these projects have now been entitled. Full realization of these three projects will be decades into the future. These three areas would account for around 25,800 net units or almost half of all net additional units in the pipeline. (See Map 3 for area boundaries used.)

Other areas with active residential development include Downtown, Market & Octavia, and Rincon Hill.

On the commercial side, more than 90 percent of the new space would be added in the Bayview/Candlestick, Downtown districts, Mission Bay, and Transbay areas. Of these, the bulk of this space would take place in Bayview and Downtown C-3 districts.

It is perhaps worth noting how geographically concentrated development is, for both residential and commercial uses. In both cases, the majority of potential development would happen in a handful of projects in a handful of districts.

Pipeline Projects by Current Zoning Category

There is considerable variation on project sizes between--but also within--zoning district categories. Some zoning districts display similarly typed and sized projects, while others are host to a great variety of project sizes and types. First let us turn to the residential pipeline. Residential and non-residential projects are shown in separate panels.

Residential Pipeline

Figure 2 and Figure 3 give details on the size distribution for residential and non-residential projects, respectively, using plots where the position of each vertical bar represents the size of a development project, measured in square feet (a more rightward position means a larger project).

Per the top panel, the largest projects are found in Downtown Residential and Downtown Commercial zone classes. While these projects tend to be much larger than those in other district categories, there is tremendous variation *within* these districts as well, as seen by the distance between the vertical lines. Projects in residential districts, on the other hand, are far more homogenous, with the vast majority of projects consisting of fewer than 5 units. In the residential districts, there are a number of projects substantially larger than the rest, as seen from the outliers.

The lower panel analogously shows the size distribution for commercial projects, with lands zoned "public" accounting for the largest sizes, but note that this includes only a handful of projects.

Table 3 also shows the overall pipeline distribution by zoning categories, but with more detail. The vast majority of the residential pipeline falls on four land zoning classes: Public, Residential, Mixed Use, and Commercial. Two large projects are situated on parcels classified as "Public Land": the Bayview Waterfront project, most of which

Figure 2. Residential Pipeline Size Distribution, by Zoning Category

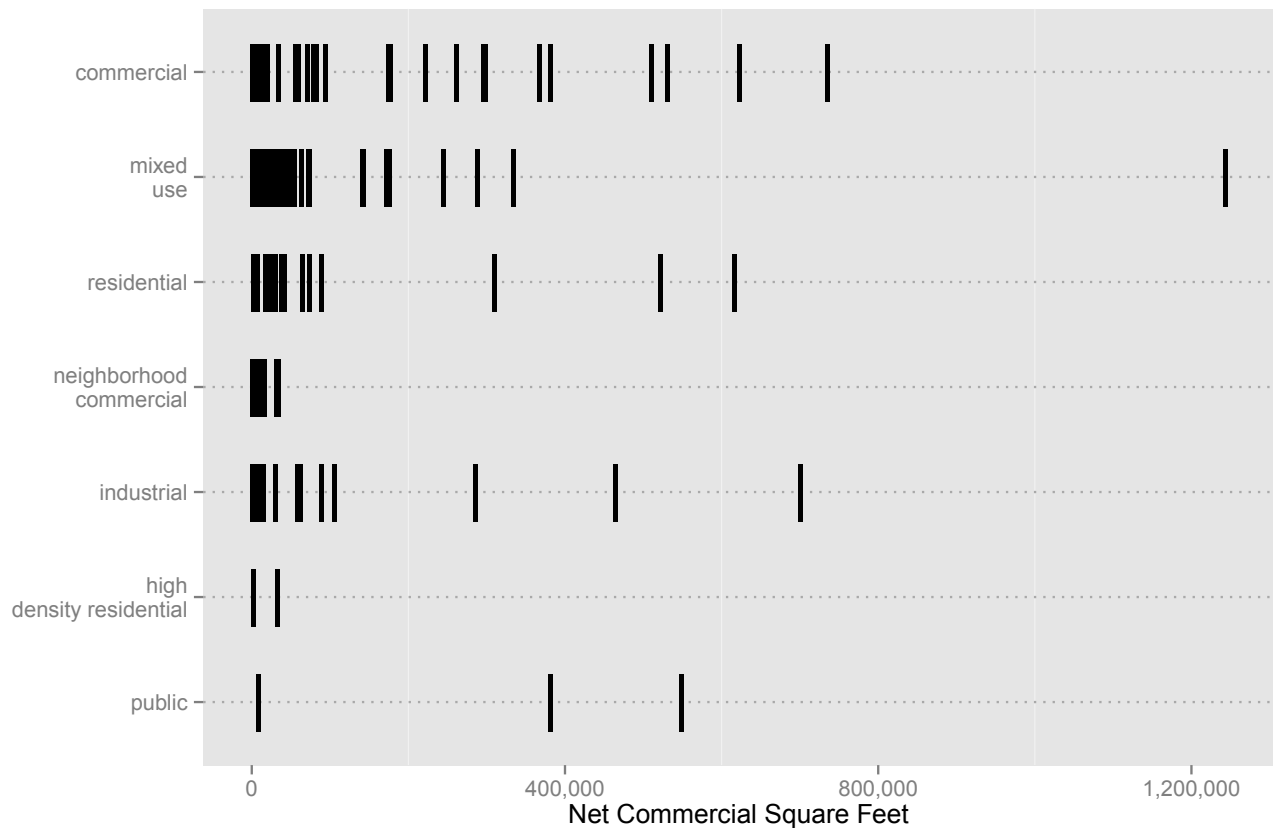

Figure 3. Non-Residential Pipeline Size Distribution, by Zoning Category

Note: Figure 2 and Figure 3 show each project plotted along an axis showing project size, by general zoning type. Projects plotted are truncated to the 99th percentile for readability.

is at Candlestick Point, and the Treasure Island redevelopment project.¹ These projects could add more than 18,200 units.

Residential projects on *residentially* zoned lots, representing the largest number of projects, account for 10,200 units, or the second largest class. Two thirds of these units, however, are in

¹ Both the Bayview Waterfront and Treasure Island projects entail reclassification of zoning to new categories; however for the purposes of this report, they are still counted in the "Public" category they were predominantly located in as the entitlement proceedings began.

the Parkmerced redesign project and a couple of large San Francisco Housing Authority projects (one in the Potrero Hill area, the other on Sunnydale Ave as part of the Hope SF program). The remainder of projects on residentially zoned parcels are relatively small with about a quarter of projects being single family housing projects. Small scale projects of one to nine units account for more than 90 percent of the residential projects. Only a handful are larger and thus account for the majority of units.

Table 3. Residential and Commercial Pipeline by Generalized Zoning Category

| District Type | Simplified Zoning | Projects | Net Units | Net Gross Sq. Ft. | Cult., Inst., Educ. | Medical | Office | Prod., Dist., Repair | Retail | Visitor |
|--------------------------|-------------------|----------|-----------|-------------------|---------------------|---------|------------|----------------------|-----------|----------|

| Grand Total | | 807 | 48,176 | 15,114,870 | 1,690,000 | -33,000 | 10,942,000 | -218,000 | 2,692,000 | 20,000 |

The mixed use districts, a diverse group ranging from Eastern Neighborhoods districts to Chinatown, account for 8,300 units in 201 projects.

Residential projects on downtown commercial zoned lots would add 5,300 new units in 53 projects, although some of these may be commercial only projects.

Another 2,700 units are pending on industrially zoned lands. About a third of these projects are mixed use projects with a commercial component. The added residential units in industrial areas are typically accompanied by loss of PDR space and addition of retail space (see Table 3).

Projects in neighborhood commercial districts would add 1,100 units in 41 projects.

Also of note, the high-density, transit-accessible downtown neighborhoods of Rincon Hill and Transbay which account for a fraction of one percent of the city's land area, nonetheless account for more than four percent of all units in the pipeline in a handful of projects. These projects are thus large, averaging more than 250 net units per project.

In contrast, residential projects in the low-density residential (RH) districts are by per zoning requirements relatively small scaled, in-fill developments, accounting for some 44 percent of proposed projects but just 2 percent of the total units (or 748 net units) in the pipeline. Projects on RM-zoned (multi-family) lots, in turn, account for 8 percent of projects and 19 percent of units, again largely because of a large project, the Parkmerced Redesign project. In terms of land area, residential zoning districts form the largest group, comprising 46 percent of the city land area.

Commercial Pipeline

Non-residential development is predominantly allowed in commercial and mixed use districts²; thus the majority of commercial space are proposed to be added in these land classes.

The commercial pipeline in general is characterized by 82 projects, but also 154 mixed use projects

which contain both residential and non-residential components. The commercial component in the 154 mixed use district projects are, in general also small, with half of projects being smaller than 5,000 gross square feet, respectively. (Some of these projects in mixed use districts are exclusively residential.)

The largest concentration of potential commercial development is in a small number of projects in areas currently zoned public³. Development here would add some net 6.7 million square feet, or 42 percent of all proposed commercial development, in just 8 projects. The largest of these proposed developments is the Bayview Waterfront Project which would add millions of commercial square feet..

Downtown Commercial districts account for a sizeable concentration of non-residential development, with 3 million square feet in 54 projects. The mixed use districts account for a larger *number* of projects (even if this count may include projects that are exclusively residential) totalling 1.9 million square feet. The remaining districts account for only a minor portion of non-residential development.

High density residential and industrial districts will see some loss of commercial square footage as some of these spaces are converted to residential uses.

Residential Pipeline by Project Size

Table 4 shows the residential pipeline by neighborhood, and offers detail on the project size.⁴

Different areas exhibit different project size distributions. Thus we see that, for instance, Downtown will get the bulk of its units in large projects (50-99 units, 100-249 units, above 249 units). This is also the case for areas like Market Octavia, Showplace Square, and in particular Transbay and Rincon Hill. Conversely, for Inner Sunset, the largest addition come in projects of two to nine units and single family projects. For

³ See Footnote 1.

⁴ In most cases this is measures the number of units in the building. However, a handful of projects include more than one building thus making this accounting an approximation.

² Some institutional uses are allowed in residential districts, such as day care and residential care. Further, P-zoned properties are occasionally developed.

the city as a whole, three out of every four units could come in a relative small number of projects or development programs containing more than 250 units, while the overwhelming majority of areas have a size distribution that is leaning more on the smaller end of the spectrum, suggesting

the relative geographic concentration of proposed development.

Small scale, in-fill projects make up the bulk of pipeline projects, but account for a minority of units: More than two thirds of the residential projects would entail buildings with 10 units or less, while half the projects include three units

Table 4. Projects by Neighborhood and Building Size

| Neighborhood | Project Size | | | | | | | Grand Total | Rank |
|------------------------|---------------|-----------|-------------|-------------|-------------|---------------|-----------|-------------|------|

Notes:

/1/ Housing unit counts are not rounded.

/2/ As the table categorizes by building size, numbers here represent total units as opposed to net units (subtracting replaced units), for which reason the unit count is higher than in other summary tables.

Figure 4. Residential Pipeline, by Status & Building Size

Figure 5. Non-Residential Pipeline, by Status & Building Size

Note: Figure 4 and Figure 5 show each project plotted along an axis showing project size, by general zoning type. Projects plotted are truncated to the 99th percentile for readability.

or less. Summing the bottom half of all pipeline projects would contribute 2,900 units, or six percent of the total number of pipeline units. Areas where these small projects are typical include areas like Richmond, Ingleside, Inner Sunset, and Central

Except for Parkmerced, development in residentially zoned areas in the western part of the city is limited in scope and consists chiefly of small-scale in-fill projects. The majority of units, and the vast majority of projects are in buildings of 1, or 2 to 9 units.

Figure 2 shows the residential pipeline by building size and pipeline status. The residential pipeline shows that:

- Of the 1,600 units with building permits approved, two thirds of the units are in buildings of 100 units and above.
- Only three percent of the residential pipeline will be in buildings with nine units or less across all entitlement stages.
- Single family homes constitute a fraction of one percent of the total units in the pipeline.

Project Size and Status of Development

Per Figure 4 and Figure 5, there is some variation in project size by stage of development. Currently, a sizeable share of residential construction falls in the largest size category, reflecting in part that a significant number of large projects have been entiled for years and construction deferred during the Great Recession. Once economic conditions improved, these projects entered construction. The pattern on the non-residential side is somewhat less “top heavy,” with bigger projects found in earlier stages of development, likely attributable to the focus on residential rather than commercial development in recent years.

Conversion of Commercial Space to Residential Use⁵

There are 49 projects in the current pipeline database proposing demolition or conversion of existing production, distribution and repair-use (PDR) buildings to residential use. The corresponding figure for the conversion of office space is 34 projects. These projects represent approximately ten percent with or 3,000 units and 3,400 units, respectively, of the residential units in the pipeline.

Conversion of PDR Space

Table 5 provides a measure of how many units are produced relative to the lost PDR space.

- If the pipeline were developed as proposed, about 700,000 sq ft of PDR space would be lost to conversion or demolition.⁶ It would be replaced with residential units (3,000) and/or other commercial uses.
- Most of the PDR to residential conversions are found in Central Waterfront, East SoMa and Mission districts, accounting together for more than two thirds of the overall loss. The loss of PDR space in these neighborhoods would in turn bring in 1,900 net new housing units.

Conversion of Office Space

- Approximately 1.1 million sq ft of office space is proposed to be converted to residential and/or other commercial use. This loss of office space is mainly taking place in the northeastern part of the city due to the concentration there. Table 6 shows that Market Octavia could see a loss of nearly 500,000 square feet of office. This is predominantly due to one particularly large conversion of the Triple-A building to residential use. For the neighborhood as

⁵ Numbers represented here differ from those reported in Table 1. Table 1 represents the net change of all projects whereas numbers here are limited to the specific projects representing conversions or demolitions resulting in a net loss of PDR space (Table 6) and office space (Table 7).
⁶ Table 6 shows only projects that include the conversion or loss of PDR space to residential use. Other, separate projects proposing to add PDR space not involving conversion or demolition of PDR space are not counted in this table. Table 1 shows a net loss of 325,000 sq ft as it is a net tally of all projects that add, convert or demolish PDR space while this table only counts loss.

Table 5. PDR Space Conversion to Residential Use, by Planning District

| Neighborhood | Projects | Percent | Net Units | Percent | PDR Net | Percent | Avg Units / Project | Avg Loss / New Unit |

| Grand Total | 34 | 100.0% | 3,380 | 100.0% | -1,131,100 | 100.0% | 99 | -300 |

a whole, 1,000 new units could result from conversion.

- Nearly all units replacing office uses are in mid-to high-rise residential structures of 20 to 500 housing units in high density zoning districts. These projects are mostly concentrated in the eastern half of the city: Rincon Hill, East SoMa, Showplace Square & Potrero Hill, Transbay, Mission and Downtown.
- These conversions of a number of *individual* office buildings reported here notwithstanding, taken together with other commercial developments in the pipeline as shown in Table 1, the overall result would still be a net addition of office space. As reported in Table 1, the net addition of office amounts to 11 million sq. ft. citywide.

Past Year Activity

Project Application Filings

Table 7 shows that a total of 32 planning applications were filed in the last quarter of 2013, up from 24 a year before. Corresponding to these 32 projects are some 2,000 residential units and 2.6 million square feet of non-residential commercial development. This represents a clear increase and signals increased interest in new development, both residential and commercial types. Due to the relatively long time it takes to entitle and build a project, there is, as seen in this report, still a significant reservoir of projects in the pipeline from before the recession, and as markets improve further we will see more of these enter the construction phase.

Projects approved during any given quarter shows a time lag relative to the projects filed curve. A project is often approved in another quarter than the one in which it was filed, particularly for projects needing environmental review and/or conditional use authorization, while others are abandoned altogether before approval.

A few of the larger projects filed during the second quarter of 2013 include:

- At Seawall lot 337/Pier 48 (Mission Rock, the proposed project includes a mixed-use development, including open space, commercial, residential, retail and parking. The project would include approximately 3,600,000 sf of development including 1,700,000 sf of commercial use including office space, 650 to 1,500 residential units, 150,000 to 250,000 sf of retail or entertainment use, 700 accessory parking space, and a parking structure with 2,300 parking stalls. The project would also involve the rehabilitation and reuse of Pier 48.
- At 2101 & 2155 Webster Street, the proposed project is to renovate an existing office building and dental school into 66 dwelling units. Additionally, the proposed project would construct 11 dwelling units (townhouses) in four buildings on the existing surface parking lot, for a total of 77 residential units. The project would retain the existin surface parking lot and would provide 8,069 sf of common open space.
- At 1201-1225 Tennessee Street, the existing commercial structure is to be demolished and replaced with a six story mixed use building including approximately 300 dwelling units and 5,000 square feet of retail.
- At 923 Folsom Street, a proposed project would include demolition of an existing 3,750 sq.ft., 3-story commercial office building related to MTR Western Bus Station and construction of a four and eight story, 114 unit mixed-use residential building with approximately 1,800 sq ft of ground floor commercial space and below grade stacked residential parking with 87 off-street parking spaces (including one car share space).
- At 1550 Market Street, the demolition of two existing buildings and the construction of a new 12-story residential tower with 109 dwelling units, 4,560 sq ft of ground floor commercial space, 105 bicycle parking spaces, a car share space, 28 off-street parking spaces, and a landscaped roof deck.
- At 815 - 825 Tennessee Street, the proposed project would result in the demolition of the two-story 815-825 Tennessee buildings, retaining the brick facade on the corner of

| Grand Total | 69 | 1,490 | -187,000 |

Tennessee & 19th Streets (listed as a known historic resource in the Central Watrefront Survey) and construction of a new 6-story apartment building with subterranean parking using conventional parking and parking stackers. The project would result in the construction of 58-foot tall residential building with 88 dwelling units, with 58-off street parking spaces.

Completed Projects

Table 8 shows that the past four quarters resulted in a net addition of 1,490 units to the city's housing stock. This addition often came in the form of conversions, and was associated with an overall loss of commercial space. The median time to completion for these projects from the first filing was 45 months. Smaller projects less than 10,000 sq ft had a median completion time of 36 months, while those larger than 250,000 sq ft took 72 months to completion.⁷ These times may reflect a recession effect where a project sponsor may have delayed construction due to market or financing considerations.

⁷ Certificate of Final Completions will occasionally lag the actual completion time and/or may be recorded on a different permit application finalizing work authorized per an older permit, so these figures should be taken as approximations.

| Block Lot | Concatenated 4-digit assessor block + 3-digit assessor's lot Numbers |
| Address | Name and address of project. |
| Planning Neighborhood | Areas related to current planning efforts and roughly to city neighborhoods. |
| PROJECT STATUS | |
| Under Construction | Project is under construction. |
| BP Approved | DBI approved building permit. |
| BP Issued | Project sponsor has picked up approved building permit (proxy measure of under construction) |
| BP Reinstated | DBI reinstates a lapsed building permit (lapses after 1 year with no activity). |
| BP Filed | Application for building permit filed with DBI. |
| PL Approved | All Planning actions approved. |
| PL Filed | Project application filed with the Planning Department |
| Bestdate | The date of the most recent action leading to the BESTSTAT value, i.e., a project's current pipeline status (e.g., date building permit application is filed if BESTSTAT = BP Filed). |
| DEVELOPMENT PROFILE | |
| Units | Net total dwelling units. |
| Net Comm'l Sq. Ft | Nonresidential gross square feet (GSF). Best interpreted as net new useable GSF with demolition of existing space subtracted (not total project gsf). |
| CIE | CIE or Cultural, Institutional, Educational includes educational services, social services, museums, zoos, and membership organizations. |
| MED | Medical includes health services offices and hospitals and laboratories throughout the City. |
| MIPS | MIPS is largely any activity where information is the chief commodity that is processed (managerial, information, professional, business services, multi-media). |
| PDR | PDR or Production, Distribution and Repair includes automobile and other repair services throughout the City, plus construction, transportation, communications, utilities, agriculture mining, manufacturing, wholesale trade, and motion picture production distribution, and services located outside of the downtown, transbay, and Northeast Districts. Does not include undeveloped or vacant land area used for PDR activities such as construction yards or open storage areas. |
| RETAIL/ENT | Retail Includes retail trade, amusement and recreation services, and personal services located throughout the City. |
| VISITOR | Visitor (or Hotel) includes hotels and other lodging located throughout the City. |
| Land Use | This field summarizes in one word what type of project is being proposed. Apart from the commercial categories listed, this field includes <ul style="list-style-type: none"> - Mixres (when both commercial and residential uses are proposed) - Mixed (when no residential use present and when multiple commercial uses are proposed and not one is dominating (>80% of commercial square feet)) - Resident is used to denote any residential project where there is no commercial component. |

Quarter 2, 2013

Subset of pipeline where project adds either more than 10 units or 10,000 GSF
